

Thomas Smeenk on Hemostemix's autologous stem cell therapy technology and why some call it 'the fountain of youth'

written by InvestorNews | April 27, 2021

In a recent InvestorIntel interview, Tracy Weslosky spoke with Thomas Smeenk, Co-Founder, President and CEO of [Hemostemix Inc.](#) (TSXV: HEM | OTC: HMTXF), about Hemostemix's autologous stem cell therapy and why he calls the technology "the fountain of youth."

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Thomas went on to say that Hemostemix's lead product ACP-01 works by treating ischemia (lack of blood circulation) in a patient's body. The technology has already been used to treat around 500 patients suffering from ischemia in the heart, arteries, and limb. He added that using the technology many patients were able to "save their limbs from otherwise certain amputations." Hemostemix has 91 patents including a patent on the automation of production which enables the company to scale the business "exponentially" as over a million patients lose their limbs to amputation in North America alone. The technology is now in Phase 2 clinical trial.

About Hemostemix Inc.

Hemostemix is a publicly traded autologous stem cell therapy company. A winner of the World Economic Forum Technology Pioneer

Award, the Company developed and is commercializing its lead product ACP-01 for the treatment of CLI, PAD, Angina, Ischemic Cardiomyopathy, Dilated Cardiomyopathy and other conditions of ischemia. ACP-01 has been used to treat over 300 patients, and it is the subject of a randomized, placebo-controlled, double blind trial of its safety and efficacy in patients with advanced critical limb ischemia who have exhausted all other options to save their limb from amputation.

On October 21, 2019, the Company announced the results from its Phase II CLI trial abstract entitled “Autologous Stem Cell Treatment for CLI Patients with No Revascularization Options: An Update of the Hemostemix ACP-01 Trial With 4.5 Year Followup” which noted healing of ulcers and resolution of ischemic rest pain occurred in 83% of patients, with outcomes maintained for up to 4.5 years.

The Company owns 91 patents across five patent families titled: Regulating Stem Cells, In Vitro Techniques for use with Stem Cells, Production from Blood of Cells of Neural Lineage, and Automated Cell Therapy.
