

Critical Minerals in the Congo: A Strategic Treasure Trove

written by Tracy Hughes | October 18, 2023

The Democratic Republic of Congo (DRC), known for its vibrant history and rich cultural fabric, is increasingly coming under the limelight for its vast mineral wealth. A deeper look into its mineral assets sheds light on global geopolitics, economic tactics, and the progression of technology.

I am thrilled to announce that tomorrow at 11 AM EST, I will be moderating a panel discussion for the Critical Minerals Institute (CMI) themed “Critical Minerals in the Congo”. The CMI has been organizing a monthly masterclass for its members. If you’re interested, drop me an email, and I’ll be happy to offer you a complimentary pass. This gesture underscores our commitment to learning and growth. Special thanks to the Directorial Team for their unwavering dedication.

During this Masterclass, we are privileged to host two distinguished CMI Board Members, Melissa ‘Mel’ Sanderson and Russell Fryer, both with invaluable on-ground experience in the Congo. Mel has dedicated 16 years to fortifying relations in Congo on behalf of Freeport McMoRan. On the other hand, Russell heads Critical Metals PLC, an LSE-listed firm focusing on Congo’s burgeoning copper sector. For an in-depth analysis, do watch our recently released interview: [“Russell Fryer on Critical Metals PLC’s Strategic Moves in the DRC and Global Expansion.”](#)

DRC’s Mineral Wealth: Tracing its Roots

While preparing for this Masterclass, I delved into some historical backdrop.

In the early 20th century, the DRC's incredible mineral affluence left European geologists in awe, leading them to describe it as a "geological scandal". Today, the nation boasts an estimated mineral cache valued at an astonishing \$24 trillion. The World Bank echoes this magnitude by spotlighting the country's 80 million hectares of cultivable land, housing a diverse array of over 1,100 minerals and gemstones. Key amongst them are:

- **Coltan (Columbite-tantalite):** A unique tar-like mineral.
- **Cobalt:** Extracted from nickel and copper mining, it's pivotal for myriad applications.
- **Uranium:** A potent element with energy and defense connotations.
- **Copper:** Reinforcing the DRC's stature as Africa's top copper producer.

These aren't merely geological marvels. They are the linchpins for numerous global industries, spanning aerospace, defense, tech, electronics, and automotive.

The US's Escalating Focus on African Minerals

The strategic gravity of these minerals has piqued the interest of global giants, particularly the US. A series of recent American endeavors underscore its intensified involvement with mineral-abundant African countries. Highlights include:

- Initiatives in Lusaka and Kinshasa to jumpstart local battery fabrication.
- Kimberly Harrington of the Bureau of Energy Resources

underscoring the pivotal role of critical minerals in the impending clean energy wave.

- A significant US investment of \$150 million in Mozambique's graphite mining to augment graphite output and enrich the global supply network.
- The US-driven Minerals Security Partnership (MSP) propelling the agenda of infusing overseas investment and technical acumen into the mining facets of emerging economies.

Further solidifying the centrality of minerals in the automotive and energy pivot, the US Secretary of State, Antony Blinken, endorsed a pact with Congo and Zambia, bolstering their joint vision to shape an electric-vehicle supply chain.

DRC vs. China: The Germanium Powerplay

In a fascinating twist in the global mineral narrative, a novel facility in the DRC is set to challenge China's germanium stronghold. Presently, China reigns supreme, manufacturing a staggering 60% of global germanium. But with the DRC's latest venture, supported by the state-backed miner Gecamines' affiliate STL, aspiring to claim 30% of worldwide production, the scales may soon tip.

Given germanium's indispensable roles in fiber-optic connectivity, infrared optics, and space ventures, this move is monumental. The DRC's ambition is clear: to emerge as a powerhouse not just in cobalt and copper, but also in the germanium sector.

Final Thoughts

The mineral narrative of the DRC is a captivating tale of tactics, global significance, and boundless potential. As our world forges ahead with tech innovations and sustainable shifts,

the DRC's mineral treasure is set to shimmer even brighter.
