

InvestorTalk Alert: Ali Haji from American Tungsten Corp. to host on Wednesday, July 22, 2026, at 9:00 AM EST

written by InvestorNews | July 21, 2026

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Wednesday, July 22, 2026, at 9:00 AM EST, featuring Ali Haji, CEO and Director, [American Tungsten Corp.](#) (TSXV: TUNG | OTCQB: TUNGF). To participate in this engaging discussion, please [click here](#)

American Tungsten Corp. is a Canadian-based exploration and development company advancing the Ima Mine Project, a high-quality, private-patented, past-producing underground tungsten mine in Idaho, USA. The Company's strategy is focused on returning Ima to commercial production through a phased development plan. Phase I evaluates the potential processing of existing surface tailings, offering a lower-capital route to near-term production. Phase II targets rehabilitation and restart of the historic underground mine, supported by existing site infrastructure and its past production history. With tungsten recognized as a critical metal for defense, industrial manufacturing and advanced technologies, American Tungsten is working to re-establish domestic tungsten production and strengthen North American supply chain security.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from American Tungsten for your review, which are listed below:

- July 16, 2026 – American Tungsten Advances Metallurgical and Infrastructure Studies at the IMA Mine – [click here](#)
- July 15, 2026 – American Tungsten Corp. Announces Results of Annual General and Special Meeting of Shareholders and Provides Management Update – [click here](#)
- June 30, 2026 – American Tungsten Corp. Adjourns Annual General and Special Meeting – [click here](#)
- June 23, 2026 – American Tungsten Reports 125 Feet of Tungsten-Silver Mineralization – [click here](#)

We found the June 23rd news release titled, “*American Tungsten Reports 125 Feet of Tungsten-Silver Mineralization*” particularly noteworthy and here are 5 key data points from it:

- **125 Feet of Aggregate Mineralization** – Hole AT26-21 intersected over 125 aggregate feet of tungsten-silver mineralization at the Ima Mine in Idaho.
- **High-Grade Tungsten Zones Reported** – AT26-21 returned 76.7 feet grading 0.327% $W O_3$, including multiple intercepts above 0.6% $W O_3$, and 26.2 feet grading 0.41% $W O_3$, including intercepts above 0.8% $W O_3$.
- **New Secondary Vein System Identified** – The hole intersected two additional major quartz-tungsten veins about 100 feet east of historical production stopes, outside the original target area.
- **Molybdenum Limits Extended** – Hole AT26-25 intersected broad quartz-pyrite-molybdenite sheeted veins and tungsten-bearing quartz veins, extending the known limits of molybdenum mineralization in the Ima stock.
- **Follow-Up Drilling Underway** – An additional underground hole targeting the new zone has already been completed, with further surface drilling planned under the ongoing Phase 2 drill program.
