## InvestorTalk Alert: Barry Baim from West High Yield (W.H.Y.) Resources Ltd. to host on Tuesday, October 28, 2025

written by InvestorNews | October 27, 2025
InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Tuesday, October 28, at 9:00 AM EST, featuring Barry Baim, Director, West High Yield (W.H.Y.)
Resources Ltd. (TSXV: WHY). To participate in this engaging discussion, please click here

West High Yield (W.H.Y.) is a junior mining exploration and development company focused on acquiring, exploring, and developing mineral resource properties in Canada. Its primary objective is to develop its Record Ridge critical mineral (magnesium, silica, nickel, and iron) deposit using green processing techniques to minimize waste and CO2 emissions. The Company's Record Ridge critical mineral deposit located 10 kilometers southwest of Rossland, British Columbia has approximately 10.6 million tonnes of contained magnesium.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from West High Yield (W.H.Y.) for your review, which are listed below:

- October 24, 2025 West High Yield (W.H.Y.) Resources Ltd.

  Announces Exercise of Warrants <u>click here</u>
- October 21, 2025 West High Yield Resources Receives Green-Light Permit for Record Ridge Industrial Mineral Mine — Advancing Canada's Domestic Critical Mineral

Refining - <u>click here</u>

■ October 15, 2025 — West High Yield (W.H.Y.) Resources Ltd.

Announces Exercise of Warrants — click here

We found the October 21<sup>st</sup> news release titled, "West High Yield Resources Receives Green-Light Permit for Record Ridge Industrial Mineral Mine — Advancing Canada's Domestic Critical Mineral Refining" particularly noteworthy and here are 5 key data points from it:

- Mines Act Permit Granted: The British Columbia Ministry of Mines and Critical Minerals has officially issued the Mines Act Permit authorizing the development and operation of the Record Ridge Industrial Mineral Mine (RRIMM) near Rossland, BC marking a major milestone for West High Yield Resources.
- Critical Minerals Portfolio: The RRIMM contains magnesium, silica, nickel, and iron, all key to clean energy and advanced manufacturing. Initial ore will be shipped to a U.S. processor, generating early cash flow while preparing for domestic downstream development.
- Indigenous Partnership: Construction and operations will be conducted in collaboration with Skemxist Solutions, a company of the Osoyoos Indian Band (OIB), ensuring Indigenous leadership in environmental management, employment, and contracting.
- Future Development Vision: West High Yield plans to amend the Permit for responsible expansion and establish Canada's first magnesium-refining facility, creating longterm jobs and advancing the country's domestic critical minerals capacity.
- Low-Impact, ESG-Focused Design: The RRIMM is a small-scale, environmentally responsible project with no

chemical processing, tailings, or emissions — aligning with ESG principles and supporting Canada's clean-energy and decarbonization goals.
