InvestorTalk Alert: Brett Marsh from Spartan Metals Corp. to host on Tuesday, July 21, 2026, at 9:00 AM EST

written by InvestorNews | July 20, 2026

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Tuesday, July 21, 2026, at 9:00 AM EST, featuring Brett Marsh, President, CEO, and Director, Spartan Metals Corp. (TSXV: W | OTCQB: SPRMF). To participate in this engaging discussion, please click here

Spartan Metals is focused on developing critical minerals projects in stable, well-established mining jurisdictions in the Western United States, with an emphasis on strategic defense minerals including tungsten, rubidium, antimony, bismuth, and arsenic. The Company's portfolio includes an option to earn 100% of the Victorio Tungsten-Molybdenum Project in New Mexico and its 100%-owned Eagle Tungsten-Silver-Rubidium Project in Nevada. Victorio hosts the largest tungsten resource in the United States and also contains significant beryllium and fluorspar concentrations. Eagle hosts the highest-grade historic tungsten resource in the United States, along with under-defined resources of high-grade silver, rubidium, antimony, bismuth, indium, precious metals, and base metals.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Spartan Metals Mining for your review, which are listed below:

- July 16, 2026 – Spartan Metals Expands Past-Producing

Tungstonia Mine Mineralization Footprint More Than 13-Fold, Defining 5.7 km2 of Tungsten-Silver Veins with Assays up to 5.18% WO3 – click here

- July 7, 2026 – Spartan Metals' Past Producing Rees Tungsten Mine delivers 6.76% and 8.48% WO3 and Reinforces the Eagle Project's Expanding Tungsten Potential – click here
- June 30, 2026 – Spartan Metals Identifies 537 Feet (163.7 Meters) 0.23% WO3Eq or 0.31% MoEq During Historic Drilling Validation at Its Victorio Tungsten-Molybdenum Project, New Mexico – click here
- June 25, 2026 – Spartan Metals Reports Significant Silver-Antimony-Copper Assays with Grades up to 1,927 g/t Ag, 0.67% Sb, and 1.83% Cu from Past Producing Antelope Mine, Nevada – click here

We found the July 16th news release titled, "*Spartan Metals Expands Past-Producing Tungstonia Mine Mineralization Footprint More Than 13-Fold, Defining 5.7 km2 of Tungsten-Silver Veins with Assays up to 5.18% WO3*" particularly noteworthy and here are 5 key data points from it:

- **Tungstonia Footprint Jumps From One Mine Area to 5.7 km²** – Spartan says fieldwork has expanded the known tungsten-silver mineralized area at Tungstonia from roughly 750 m by 550 m at acquisition to about 2.7 km by 2.1 km.
- **6.8 km of Exposed Veins Now Mapped** – The Company has confirmed eight tungsten-silver veins with a combined exposed surface strike length of approximately 6.8 km across the Tungstonia Claims.
- **Vein 4 Delivers the Top Tungsten Assay** – Rock sampling extended Vein 4 by 400 m to a confirmed length of about 1.1 km, with samples returning up to 5.18% WO_3.

- **New Spartan C Vein Added to the System** – Spartan confirmed a new vein between Veins A and B, named Spartan C, over approximately 700 m, with rock samples grading 3.67% and 2.72% WO_3.
- **Half the Claims Still Untested** – Spartan reports that approximately 50% of the Tungstonia Claims remain unexplored, while ground geophysics is concluding and about 3,000 m of core drilling is planned for early to mid-August.
