InvestorTalk Alert: Darren Cudmore to Host Kerem Usenmez of Volta Metals Ltd. on Wednesday, February 11, 2026, at 9:00 AM EST

written by InvestorNews | February 10, 2026
InvestorNews.com is pleased to announce an upcoming InvestorTalk hosted by Darren Cudmore, featuring **Kerem Usenmez, President, CEO, and Director, Volta Metals Ltd. (CSE: VLTA)**, scheduled for **tomorrow, Wednesday, February 11, 2026, at 9:00 AM EST**. To participate in this engaging discussion, please click here

Volta Metals is a mineral exploration company focused on rare earths, gallium, lithium, cesium, and tantalum. It owns, has optioned and is currently exploring a critical minerals portfolio of rare earths, gallium, lithium, cesium, and tantalum projects in Ontario, one of the world's most prolific and emerging hard-rock critical mineral districts.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Volta Metals for your review, which are listed below:

- January 26, 2026 – Volta Intersects High-Grade Gallium Mineralization at the Springer REE Project in Ontario, Canada – click here
- January 21, 2026 – Volta Commences Definition Drilling and Resource Expansion Program at the Springer REE Project in Ontario, Canada – click here
- December 23, 2025 – Volta Announces Closing of $2.8

Million Oversubscribed and Upsized Private Placement – click here

- December 18, 2025 – Ontario Minister and Nipissing First Nation Chief Visit Volta's Springer Rare Earth Project, Advancing Indigenous Partnership and Critical Minerals Development – click here

We found the January 26th news release titled, "*Volta Intersects High-Grade Gallium Mineralization at the Springer REE Project in Ontario, Canada*" particularly noteworthy and here are 5 key data points from it:

- **High-Grade Gallium Discovery –** Volta Metals Ltd. intersected broad gallium mineralization at the Springer Rare Earth Project, including 77 g/t Ga_2O_3 over 117 m, with higher-grade zones such as 120 g/t over 11.1 m and a peak of 332 g/t over 1 m.
- **Among Top North American Grades –** The drill results rank among the highest gallium assays reported in North America, highlighting the project's potential as a primary gallium-bearing REE system rather than a typical by-product occurrence.
- **Critical Mineral Market Exposure –** Gallium is listed as a critical mineral in Canada, the U.S., Europe, and Australia, with market forecasts projecting growth from roughly US$2.5B in 2024 to US$21.5B by 2034, driven by semiconductor, defense, telecom, and renewable energy demand.
- **Strategic Supply Opportunity –** With China controlling about 98% of global gallium production, the Springer project could represent a rare Western supply source and potentially produce gallium as a by-product alongside rare earth elements.

- **Established REE Resource Base –** The project hosts a historical resource of 4.2 Mt indicated at 1.14% TREO and 12.7 Mt inferred at 1.17% TREO, supporting a multi-commodity critical minerals development pathway pending further drilling and verification.
