

InvestorTalk Alert: Frank Basa from Coniagas Battery Metals Inc. to host on Tuesday, September 16, 2025

written by InvestorNews | September 15, 2025

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Tuesday, September 16th, at 9:00 AM EST, featuring Frank Basa, President, CEO, and Director of [Coniagas Battery Metals Inc.](#) (TSXV: COS). To participate in this engaging discussion, please [click here](#)

Coniagas Battery Metals Inc. is a Canadian junior mining company focused on nickel, copper, cobalt, and platinum group metals in Québec. Its strategy is to create shareholder value by developing mineral properties and becoming a critical metals supplier to the electric vehicle (EV) market. At its 100%-owned Graal project near Saguenay, Quebec, Coniagas has run successful geophysics and shallow drilling, hitting mineralization in nearly every hole. Results confirm an open-pit model along a 6 km strike with high-grade nickel and copper plus cobalt, platinum, and palladium. Near-term plans include further drilling, a NI 43-101 resource report, metallurgical testing, and First Nations consultations.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Coniagas Battery Metals for your review, which are listed below:

- September 8, 2025 – Coniagas Battery Metals Receives Permit to Begin Drilling at Graal – [click here](#)

- August 20, 2025 – UQAC Research Partnership Advances Understanding of Ni-Cu Mineralization at Coniagas’ Graal Property – [click here](#)
- July 22, 2025 – Coniagas Announces Revocation of MCT0 – [click here](#)

We found the August 20th news release titled, “*UQAC Research Partnership Advances Understanding of Ni-Cu Mineralization at Coniagas’ Graal Property*” particularly noteworthy and here are 5 key data points from it:

- **Academic Partnership** – Coniagas has partnered with Université du Québec à Chicoutimi (UQAC) to study the metallogenic processes behind nickel-copper sulfide formation at the Graal Property, part of the Lac-Saint-Jean Anorthositic Suite.
- **Research Focus** – UQAC’s master’s project, led by Professors S. Dare and R-L. Simard, is analyzing drill core and conducting petrogeochemical characterization of anorthositic facies in the Discovery, Gravi, and MHY mineralized zones to improve exploration models.
- **Exploration Program 2025** – Planned activities include completing an airborne EM-mag survey, initiating a diamond drilling campaign, integrating UQAC’s research findings into targeting, and advancing permitting and stakeholder engagement.
- **Strategic Context** – The work strengthens Quebec’s position as a center for critical minerals research, leveraging clean hydro power, infrastructure, and proximity to North American and global markets, while aligning with the Québec Plan for the Development of Critical and Strategic Minerals (2020–2025).
- **Commitment to Responsible Development** – Coniagas

emphasizes academic collaboration, stakeholder engagement with First Nations and local communities, and environmentally responsible practices, highlighting a “new era” of exploration that balances science, technology, and community values.
