

InvestorTalk Alert: Jim Atkinson from Antimony Resources Corp. to host on Wednesday, June 4, 2025

written by InvestorNews | June 3, 2025

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Wednesday, June 4th, at 9 AM EST, featuring James “Jim” Atkinson, CEO and Director of [Antimony Resources Corp.](#) (CSE: ATMY). To participate in this engaging discussion, please [click here](#)

Antimony Resources Corp. holds an option to acquire a 100% interest in two antimony projects located in New Brunswick: the Bald Hill Project, under option from Globex Mining Enterprises Inc., and the Antimony 2.0 Project. The Bald Hill Project is currently the site of drilling activity targeting a high-grade antimony deposit, with mineralization defined over a distance of 500 meters and additional antimony intersections extending a further 1 kilometer along strike. The company’s management team has experience in financing, exploration, development, and mining. Antimony Resources plans to conduct exploration campaigns on both optioned properties with the objective of identifying one or more minable resources. The company states its focus is on becoming a significant North American producer of antimony.

In preparation for tomorrow’s InvestorTalk, here are the three most recent news releases from Antimony Resources for your review, which are listed below:

- May 22, 2025 – Antimony Resources Corp. (ATMY) (K8J0) Reports Presence of Massive Antimony Bearing Stibnite Mineralization in Drill Core and on Surface – [click here](#)
- May 9, 2025 – Antimony Resources Corp. (ATMY) (K8J0) Closes First Tranche of Financing – [click here](#)
- May 5, 2025 – Antimony Resources Corp. (ATMY) (K8J0) Encounters Visual Antimony Mineralization with Thickness of up to 20 Meters Core Length from Drilling and Announces Financing – [click here](#)

Here are 5 key data points from their May 22nd news release titled, *Antimony Resources Corp. (ATMY) (K8J0) Reports Presence of Massive Antimony Bearing Stibnite Mineralization in Drill Core and on Surface*”:

- **Drilling Progress & Results:** Over 1,600 meters of a planned 2,500-meter drill program at the Bald Hill Project have been completed, with approximately 80% of drill holes intersecting massive stibnite or stibnite-bearing breccia.
- **Surface Discoveries:** Antimony-bearing stibnite mineralization has been identified in surface outcrops over a 300-meter distance, with potential extension of at least 200 meters to the southeast based on recent prospecting.
- **Historical Resource Estimate:** A 2010 historical NI 43-101 technical report identified a potential resource of 725,000 to 1,000,000 tonnes grading 4.11% to 5.32% antimony (Sb), equating to ~30,000 to 40,000 tonnes of contained antimony.
- **High-Grade Intercepts:** Previous drilling highlights include Hole DDH08-03, which intersected 4.51 meters grading 11.7% Sb, including 2.29 meters grading 20.9% Sb; trenching 450 meters south of the Main Zone returned 2.90%

Sb over 8.18 meters.

- **Strategic Significance:** With China recently cancelling antimony exports and prices rising significantly, Antimony Resources is positioning itself to become a key North American supplier by accelerating exploration and aiming for a maiden resource estimate by year-end 2025.
