

InvestorTalk Alert: Jim Atkinson from Antimony Resources Corp. to host on Thursday, June 11, 2026, at 9:00 AM EST

written by InvestorNews | June 10, 2026

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Thursday, June 11, 2026, at 9:00 AM EST, featuring Jim Atkinson, CEO and Director, [Antimony Resources Corp.](#) (CSE: ATMY | OTCQB: ATMYF). To participate in this engaging discussion, please [click here](#)

Antimony Resources is an exploration and development company focused exclusively on Antimony. The Company's management team possesses extensive experience in financing, exploration, development and mining. The Company is focused on becoming a significant North American producer of antimony.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Antimony Resources for your review, which are listed below:

- June 08, 2026 – Antimony Resources Corp. (ATMY) (ATMYF) (K8J0) Announces Assay Results up to 44.2% Antimony from Trenching of the South Zone at Bald Hill – [click here](#)
- June 04, 2026 – Antimony Resources Corp. (ATMY) (ATMYF) (K8J0) New Brunswick Minister of Natural Resources Visits Bald Hill Antimony Project – [click here](#)
- May 13, 2026 – Antimony Resources Corp. (ATMY) (ATMYF) (K8J0) Announces Assay Results at the Bald Hill Antimony

Deposit Including Intersections of 26.9% Antimony (Sb) – [click here](#)

We found the June 8th news release titled, “*Antimony Resources Corp. (ATMY) (ATMYF) (K8J0) Announces Assay Results up to 44.2% Antimony from Trenching of the South Zone at Bald Hill*” particularly noteworthy and here are 5 key data points from it:

- **High-Grade South Zone Assays** – Rock samples from trenching at the South Zone returned very strong antimony values, with 38 samples averaging 19.5% Sb and individual assays reaching up to 44.2% Sb.
- **New Mineralized Zone Confirmed** – The South Zone is located about 900 metres south of the Main Zone and appears to represent a separate, parallel but offset antimony trend, highlighting new exploration upside beyond the core deposit.
- **200-Metre Trenching Program Delivered Results** – The reported samples were collected from trenches excavated over more than 200 metres along the South Zone, where mineralization is described as stibnite associated with brecciated sediments.
- **Drilling to Follow Up Immediately** – The Company said the South Zone will be tested as part of its ongoing spring regional exploration drilling program, with the next phase also including airborne geophysics, soil sampling, mapping, and further trenching.
- **Broader Bald Hill Expansion Potential** – Management said the results support the view that the recently identified “New Zones” could materially expand Bald Hill’s antimony footprint, with a large portion of the 3,700+ hectare property still remaining to be explored.
