

# InvestorTalk Alert: Jim Atkinson from Antimony Resources Corp. to host on Wednesday, September 17, 2025

written by InvestorNews | September 16, 2025

[InvestorNews.com](#) is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Wednesday, September 17<sup>th</sup>, at 9 AM EST, featuring James “Jim” Atkinson, CEO and Director of [Antimony Resources Corp.](#) (CSE: ATMY). To participate in this engaging discussion, please [click here](#)

Antimony Resources is an exploration and development company focused exclusively on Antimony. The Company’s management team possesses extensive experience in financing, exploration, development, and mining. The Company is focused on becoming a significant North American producer of antimony.

In preparation for tomorrow’s InvestorTalk, here are some recent news releases from Antimony Resources for your review, which are listed below:

- September 15, 2025 – Antimony Resources Corp. (ATMY) (K8J0) Closes Flow Thru Financing – [click here](#)
- August 28, 2025 – Antimony Resources Corp. (ATMY) (K8J0) Report More Massive Antimony-Bearing Stibnite (“Sb”) with Assays up to 5.27% Sb over 4.95 Meters Including a Zone of Massive Antimony-Bearing Stibnite Which Returned 11.3% Sb over One Meter – [click here](#)
- August 25, 2025 – Antimony Resources Corp. (ATMY) (K8J0) Closes First Tranche of Financing – [click here](#)

We found the August 28<sup>th</sup> news release titled, “*Antimony Resources Corp. (ATMY) (K8J0) Report More Massive Antimony-Bearing Stibnite (“Sb”) with Assays up to 5.27% Sb over 4.95 Meters Including a Zone of Massive Antimony-Bearing Stibnite Which Returned 11.3% Sb over One Meter*” particularly noteworthy, and here are 5 key data points from it:

- **High-Grade Intercepts:** Multiple drill holes returned significant antimony mineralization, including up to 11.3% Sb over 1.0 meter (within 5.27 m grading 4.95% Sb in Hole BH-25-11) and 7.6% Sb and 5.82% Sb zones in BH-25-12.
- **Main Zone Expansion:** Drilling extended the Main Zone by over 100 meters to the southeast and confirmed mineralization to a depth of at least 400 meters, significantly expanding project potential.
- **Phase One Program Results:** Phase One drilling totaled 3,150 meters across 16 holes, with over 75% of holes intersecting high-grade antimony, demonstrating strong continuity of mineralization.
- **Geological Characteristics:** Mineralization consists of massive stibnite, stibnite-bearing veins, and breccia, striking NNW and dipping steeply southwest, with alteration halos of sericite, quartz, and carbonate.
- **Historical High-Grade Context:** Bald Hill has a history of exceptional grades, including past results such as 20.9% Sb over 2.29 meters, reinforcing its reputation as one of North America’s most promising high-grade antimony projects.
