

InvestorTalk Alert: Kerem Usenmez from Volta Metals Ltd. to host on Thursday, October 23, 2025

written by InvestorNews | October 22, 2025

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Thursday, October 23, at 9:00 AM EST, featuring Kerem Usenmez, President, CEO, and Director, [Volta Metals Ltd.](#) (CSE: VLTA). To participate in this engaging discussion, please [click here](#)

Volta Metals Ltd. is a mineral exploration company based in Toronto, Ontario, focused on rare earths, gallium, lithium, cesium, and tantalum. It owns, has optioned and is currently exploring a critical minerals portfolio of rare earths, gallium, lithium, cesium, and tantalum projects in Ontario, one of the world's most prolific and emerging hard-rock critical mineral districts.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Volta Metals for your review, which are listed below:

- October 9, 2025 – Volta Signs MOU with Nipissing First Nation for Its Springer Rare Earth Element Project in Ontario – [click here](#)
- September 29, 2025 – Volta Completes Initial Drilling at Springer REE Project in Ontario – [click here](#)
- September 2, 2025 – Volta Announces Closing of Oversubscribed and Upsized Private Placement and Initiates

Drilling Program at its Springer Rare Earth and Gallium Deposit – [click here](#)

We found the September 29th news release titled, “*Volta Completes Initial Drilling at Springer REE Project in Ontario*” particularly noteworthy and here are 5 key data points from it:

- **Drill Program Completion:** Volta Metals completed a 1,638 m, four-hole diamond drilling program at the Springer Rare Earth and Gallium Deposit near Sturgeon Falls, Ontario, testing for extensions of REE mineralization, gallium potential, and confirming historic resource data.
- **All Holes Mineralized and Open:** Every borehole intersected multiple thick zones of REE-bearing syenite-carbonatite breccias (up to 125 m) and carbonatite bodies (up to 20 m), ending in mineralization that remains open for expansion at depth and along strike.
- **Historic Resource Reference:** The 2012 Tetra Tech Wardrop estimate outlined 4.2 Mt @ 1.14% TREO (Indicated) and 12.7 Mt @ 1.17% TREO (Inferred) at a 0.9% TREO cutoff, with 4–6% HREO content. Volta will conduct new drilling to upgrade this to a current NI 43-101-compliant resource.
- **Gallium and Metallurgical Focus:** One hole (SL25-23) targeted historic gallium oxide mineralization, and the program also collected fresh core for metallurgical testwork to support future processing studies.
- **Strong Technical Oversight and QA/QC:** Core observations by Dr. Fred Breaks indicate a large, intact carbonatite system with REE-rich dolomitic dykes. The company applied rigorous QA/QC protocols with OREAS REE standards and certified lab assays at Activation Laboratories Ltd., North Bay.
