In preparation for tomorrow's InvestorTalk, here are some recent news releases from Volta Metals for your review, which are listed below:

- July 14, 2025 – Volta Partners with The Idaho National Laboratory to Advance Metallurgical Work for Rare Earths and Gallium From the Springer Deposit, Ontario, Canada – [click here](#)
- June 24, 2025 – Volta Closes Option Agreement to Acquire Interest in Springer REE & Gallium Deposit in Ontario and Closes Shares for Debt Transaction – [click here](#)
- June 16, 2025 – Volta Announces Closing of Private Placement – [click here](#)

Here are 5 key data points from their July 14th news release titled, "Volta Partners with The Idaho National Laboratory to Advance Metallurgical Work for Rare Earths and Gallium From the Springer Deposit, Ontario, Canada":

- **Partnership with INL:** Volta Metals Ltd. has signed a Material Transfer Agreement with the Idaho National Laboratory (INL) to conduct advanced metallurgical testing on rare earth elements and gallium from the Springer Deposit in Ontario, Canada.
- **Strategic Objectives:** INL will assess gallium recoverability and rare earth element processing methods to support North America's domestic critical mineral supply chain, especially for defense, electronics, and AI technologies.
- **Springer Resource Estimate:** The Springer Deposit hosts a historic NI 43-101 mineral resource of 4.167 million tonnes at 1.073% TREO (indicated) and 12.73 million tonnes at 1.119% TREO (inferred), using a 0.9% cutoff.
- **High Gallium Potential:** The deposit includes high-grade gallium, now strategically critical following China's December 2024 ban on gallium exports. INL's work will determine its mineralogical deportment and recovery feasibility.
- **Favorable Infrastructure and Expansion Plans:** Located near Sturgeon Falls with year-round access and nearby power and transport infrastructure, Volta plans to drill and update the 2012 resource estimate in the next exploration season.
