InvestorTalk Alert: Marcy Kiesman from Quantum Critical Metals Corp. to host on Thursday, August 14, 2025

written by InvestorNews | August 13, 2025

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Thursday, August 14th, at 9:00 AM EST, featuring Marcy Kiesman, CEO and Director, Quantum Critical Metals Corp. (TSXV: LEAP | OTCQB: ATOXF). To participate in this engaging discussion, please click here

Quantum Critical Metals Corp. is a Canadian mineral exploration company focused on advancing critical metals projects that power next-generation technologies. With a growing portfolio of promising assets—including the NMX East Gallium-Rubidium-Cesium Project in Québec, the Discovery Gallium-Rubidium-Cesium and polymetallic project in Québec, the Victory Antimony Project in British Columbia, and the newly acquired Prophecy Germanium-Gallium-Zinc Project in British Columbia, among others, the Company is strategically positioned to support the West's transition to a secure and sustainable critical metals supply.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Quantum Critical Metals for your review, which are listed below:

- August 12, 2025 – Quantum Completes Site Visit at NMX East, Quebec – click here
- August 1, 2025 – Anomalous Rare Earth Elements in Smoky Quartz Samples within Quantum's Quest Property – click

here

- July 29, 2025 – Quantum Welcomes Karl Haase to its Metallurgy Technical Advisory Committee – click here
- July 25, 2025 – Quantum Critical Metals Initiates Metallurgical Test Work on Gallium-Rubidium-Cesium Mineralization at NMX East – click here

Here are 5 key data points from their August 12th news release titled, "*Quantum Completes Site Visit at NMX East, Quebec*":

- **Successful NMX East Site Visit** – Quantum Critical Metals Corp. completed a geological site visit at its 100%-owned NMX East project in Québec's Eeyou Istchee James Bay region, targeting the southeastern claims to investigate a magnetic high for potential ultramafic rock hosting critical minerals.
- **Dual Mineral System Potential** – The project now shows confirmed pegmatite-hosted mineralization in the north and indications of ultramafic rock potential in the south, suggesting more than one type of mineral system on the same property.
- **Proximity to Active Polymetallic Development** – NMX East is located near Power Metallic Mines Inc.'s (TSXV: PNPN | OTCQB: PNPNF) Nisk-Lion-Tiger polymetallic discoveries, where a June 2025 land acquisition expanded their project area by over 300%, highlighting strong regional exploration momentum.
- **Critical Metal Discoveries & Processing Innovation** – Reassessment of drill core assays identified elevated gallium, rubidium, cesium, niobium, and tantalum, with gallium potentially recoverable from mica using flotation and hydrometallurgy—an unconventional extraction approach.
- **Strategic Supply Chain Advantage** – With China's December 2024 ban on gallium exports, Quantum's discoveries could

help strengthen North America’s critical minerals supply for high-tech sectors, including semiconductors, defense, telecommunications, and renewable energy.
