

InvestorTalk Alert: Peter Clausi to Host Mark Wall of American Rare Earths Limited on Thursday, April 9, 2026, at 9:00 AM EST

written by InvestorNews | April 8, 2026

InvestorNews.com is pleased to announce an upcoming InvestorTalk hosted by Peter Clausi, featuring Mark Wall, President and CEO, [American Rare Earths Limited](#) (ASX: ARR | OTCQX: ARRNF | ADR: AMRRY), scheduled for tomorrow, Thursday, April 9, 2026, at 9:00 AM EST. To participate in this engaging discussion, please email tracy@investornews.com to RSVP.

American Rare Earths is a critical minerals company focused on advancing the U.S. rare earths industry through its wholly owned subsidiary, Wyoming Rare (USA) Inc. The company's flagship Halleck Creek Project in Wyoming is a large rare earth deposit with potential to support long-term domestic supply. Located on Wyoming State land, the Cowboy State Mine is suited to open-pit mining and benefits from the state's established permitting environment. American Rare Earths plans to develop onsite mineral processing and separation facilities to help reduce U.S. reliance on imported rare earths and support demand from defense, advanced technologies, and broader economic needs. The company is also pursuing environmentally responsible mining practices and collaborating with U.S.-supported research programs on extraction and processing technologies.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from American Rare Earths for your review, which

are listed below:

- April 7, 2026 – American Rare Earths Awards Whole of Property Development Assessment for Halleck Creek – [click here](#)
- April 1, 2026 – American Rare Earths Accelerates Pilot Plant to Produce Pre-Production Concentrate – [click here](#)
- March 30, 2026 – American Rare Earths Commissions Oxide to Metal Study for Heavy Rare Earths – [click here](#)
- March 25, 2026 – American Rare Earths Appoints Former Newmont Executive as Vice President, Corporate Development and Strategy – [click here](#)
- March 24, 2026 – American Rare Earths Commences Gold, Silver, Copper and Manganese Target Review at La Paz, Arizona – [click here](#)
- March 16, 2026 – Halleck Creek Ore Selected for Feedstock for the DoE METALLIC Research Consortium – [click here](#)

We found the April 7th news release titled, “*American Rare Earths Awards Whole of Property Development Assessment for Halleck Creek*” particularly noteworthy and here are 5 key data points from it:

- **Whole-of-Property Study Awarded** – American Rare Earths has awarded a Whole of Property Development Assessment (WPDA) for its Halleck Creek project in Wyoming, with work scheduled to begin in Q2 2026. The study will integrate geological, metallurgical, mining, and permitting data across the full 8,108-acre land package.
- **Expansion Beyond Cowboy State Mine** – The WPDA will build on the Phase 1 Cowboy State Mine plan and establish a roadmap for later-stage development at Red Mountain, Overton Mountain, and Bluegrass, helping the company plan

broader district-scale growth.

- **Large-Scale Resource Base** – Halleck Creek hosts an in-situ mineral resource estimate of about 2.63 billion tonnes, while the Cowboy State Mine alone has an estimated 20-year mine life and a low strip ratio of 0.38, supporting long-term development potential.
- **Supports U.S. Rare Earth Strategy** – The assessment is intended to help sequence development of what the company describes as the largest known deposit of total contained rare earth oxides in North America, aligning with U.S. policy support for domestic critical mineral supply chains.
- **Builds on 2025 Processing Breakthrough** – The WPDA follows the company’s December 2025 technical milestone, where the updated preliminary pre-feasibility flowsheet successfully produced mixed rare earth oxalate and mixed rare earth oxide, providing key processing assumptions for future development phases.
