

John Passalacqua on First Phosphate's groundbreaking achievements in the phosphate mining industry

written by InvestorNews | March 17, 2024

In an insightful interview with Tracy Weslosky of InvestorNews during PDAC 2024, John Passalacqua, CEO and Director of [First Phosphate Corp.](#) (CSE: PHOS), shared the company's strategic priorities and groundbreaking achievements in the phosphate mining industry, particularly its specialization in the lithium iron phosphate (LFP) battery sector. Passalacqua highlighted that First Phosphate's main objective at PDAC 2024 was to engage with government officials from various levels, emphasizing the event's significance as a meeting point for leaders from Canada, the United States, and internationally. He also underscored the unique position of First Phosphate as the only company fully dedicated to extracting and purifying phosphate specifically for the LFP battery industry, a factor that significantly sets them apart from other phosphate mining operations that typically focus on fertilizer production.

One of the most compelling aspects of First Phosphate's strategy is its focus on producing high-grade purified phosphoric acid from phosphate issued from volcanic rock, a process essential for manufacturing LFP batteries. Passalacqua proudly announced a recent milestone where the company successfully converted phosphate ore into phosphate concentrate and then into purified phosphoric acid in partnership with Prayon in Belgium. This achievement underlines First Phosphate's capability to contribute significantly to the LFP market in North America, a

market that is just beginning to emerge according to industry experts. Additionally, Passalacqua addressed the company's financial strategy, noting a successful capital raise of \$8.2 million against a target of \$2 million and securing a \$170 million line of credit with the Export-Import Bank of the United States (EXIM), reflecting strong investor confidence and strategic government backing for their initiatives.

First Phosphate's recent [announcement](#) of signing a memorandum of understanding with Groupe Goyette for logistics at the Hébertville-Station intermodal facility in Quebec further illustrates their strategic approach to infrastructure and supply chain development. This agreement aims to facilitate rapid transportation for the company's mining and industrial outputs, crucial for their clientele in the EV and energy storage sectors. The appointment of Armand MacKenzie as Vice-President, Government Relations, and the comprehensive plans for a purified phosphoric acid plant at Port Saguenay, Quebec, are testaments to the company's ambitious roadmap towards establishing a robust LFP battery ecosystem in North America. These steps, coupled with strategic partnerships and significant project developments, position First Phosphate as a pivotal player in the LFP battery supply chain, contributing not only to the battery industry but also promising economic, social, and job creation benefits in the Quebec region.

About First Phosphate Corp.

First Phosphate is a mineral development company fully dedicated to extracting and purifying phosphate for the production of

cathode active material for the Lithium Iron Phosphate (“LFP”) battery industry. First Phosphate is committed to producing at high purity level, in responsible manner and with low anticipated carbon footprint. First Phosphate plans to vertically integrate from mine source directly into the supply chains of major North American LFP battery producers that require battery grade LFP cathode active material emanating from a consistent and secure supply source. First Phosphate holds over 1,500 sq. km of royalty-free district-scale land claims in the Saguenay-Lac-St-Jean Region of Quebec, Canada that it is actively developing. First Phosphate properties consist of rare anorthosite igneous phosphate rock that generally yields high purity phosphate materially devoid of high concentrations of harmful elements.
