

Mark Chalmers of Energy Fuels Discusses Increasing Uranium Production in the United States

written by InvestorNews | December 30, 2023

In a recent interview with Tracy Weslosky of Investor.News, Mark Chalmers, President, CEO, and Director of [Energy Fuels Inc.](#) (NYSE American: UUUU | TSX: EFR), discussed the company's response to surging uranium prices and supportive government policies. Energy Fuels, a leading U.S. producer of uranium, rare earth elements, and vanadium, has [commenced](#) production at three of its U.S. uranium mines located in Arizona and Utah. Chalmers highlighted that Energy Fuels has produced roughly two-thirds of all U.S. uranium in the past five years and is uniquely positioned to increase production.

The decision to ramp up uranium production is driven by strong market conditions, with spot prices reaching a 16-year high, and the need to reduce reliance on Russian uranium. Energy Fuels plans to produce 1.1 to 1.4 million pounds of uranium per year by mid to late-2024, primarily from the Pinyon Plain, La Sal, and Pandora mines. Additionally, they are preparing two more mines in Colorado and Wyoming to commence production within a year, potentially increasing annual production to over two million pounds in 2025.

[Energy Fuels](#) will also continue its alternate feed recycling program and commence an ore buying program to further boost production. The company is advancing permitting and development on other large-scale mine projects, aiming to expand production up to five million pounds per year in the coming years.

Chalmers stressed Energy Fuels' commitment to not only uranium production but also advancing its multi-commodity exposure in the energy transition space, leveraging its unique capability to process minerals containing natural radioactivity. To access the complete interview, [click here](#)

About Energy Fuels Inc.

Energy Fuels is a leading US-based critical minerals company. The Company, as the leading producer of uranium in the United States, mines uranium and produces natural uranium concentrates that are sold to major nuclear utilities for the production of carbon-free nuclear energy. Energy Fuels recently began production of advanced rare earth element ("REE") materials, including mixed REE carbonate, and plans to produce commercial quantities of separated REE oxides in the future. Energy Fuels also produces vanadium from certain of its projects, as market conditions warrant, and is evaluating the recovery of radionuclides needed for emerging cancer treatments. Its corporate offices are in Lakewood, Colorado, near Denver, and substantially all its assets and employees are in the United States. Energy Fuels holds two of America's key uranium production centers: the White Mesa Mill in Utah and the Nichols Ranch in-situ recovery ("ISR") Project in Wyoming. The White Mesa Mill is the only conventional uranium mill operating in the US today, has a licensed capacity of over 8 million pounds of U_3O_8 per year, and has the ability to produce vanadium when market conditions warrant, as well as REE products, from various uranium-bearing ores. The Nichols Ranch ISR Project is on standby and has a licensed capacity of 2 million pounds of U_3O_8 per year. The Company recently acquired the Bahia Project

in Brazil, which is believed to have significant quantities of titanium (ilmenite and rutile), zirconium (zircon) and REE (monazite) minerals. In addition to the above production facilities, Energy Fuels also has one of the largest NI 43-101 compliant uranium resource portfolios in the US and several uranium and uranium/vanadium mining projects on standby and in various stages of permitting and development.
