

Troy Boisjoli of Murchison Minerals on drilling progress at its nickel-copper-cobalt HPM Project

written by InvestorNews | August 12, 2022

In this InvestorIntel interview [Murchison Minerals Ltd.](#)'s (TSXV: MUR | OTCQB: MURMF) President, CEO, and Director Troy Boisjoli speaks with host Tracy Weslosky directly from the core shack at its nickel-copper-cobalt HPM Project in Quebec.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here to access InvestorChannel.com](#)), Troy tells Tracy that the drills are turning at its battery metals site as part of a “multi-pronged exploration approach” that includes updated geophysics and field work across the property’s magmatic sulfide system. Drilling is now focused on the high-grade nickel, copper, cobalt zone called Barre de Fer. “It has a strike length of about 315 meters, a depth extent of about 295 meters, and a width of about 150 meters with individual lenses,” Troy explains, “and mineralization up to about 25 meters. The the intention of the drilling right now is to expand and and push forward at Barre de Fer and test the extent of this mineralizing system.”

Troy goes on to tell Tracy that Barre de Fer is “an area that has all of the the fundamental requirements from a technical geology perspective to have district or camp scale potential.” He goes on to say that “we also have very tangible, real results that we’re expanding on, and we’ll be able to expand on in the very near term,” and that one of the objectives of this drill program is getting into a position to have a maiden resource at

Barre de Fer.”
