

Vance White on Noble Mineral's 'mega deposit potential' of gold, nickel – and cobalt.

written by InvestorNews | March 14, 2019

Recently during PDAC 2019, Vance White, President, CEO and Director of [Noble Mineral Exploration Inc.](#) (TSXV: NOB), shared with InvestorIntel's Tracy Weslosky, why Noble Mineral shares were up +52% in the month of February. Vance started "We are not just into gold exploration we are into nickel, cobalt exploration as well which are tremendously important for the expansion of the electric vehicle market. On top of that the property sits immediately north of the Kidd Creek Mine which has produced about 160 million tons over the course of last 50 years of production. That type of mega deposit normally hosts other satellite deposits that could be in the order of 30-50 million tons. That being the case we could be looking at significant repricing of the shares in the market place."

Noble Mineral Exploration Inc. is a Canadian-based junior exploration company which, in addition to its shareholdings in Spruce Ridge Resources Ltd., and MacDonald Mines Exploration Ltd., and its interest in the Holdsworth gold exploration property in the area of Wawa, Ontario, holds in excess of 79,000 hectares of mineral rights in the Timmins – Cochrane areas of Northern Ontario known as Project 81. Project 81 hosts diversified drill-ready gold, nickel-cobalt and base metal exploration targets at various stages of exploration.
