

Byron W King talks to Energy Fuels and Ur-Energy about ramping up US uranium production

written by InvestorNews | June 24, 2022

In this InvestorIntel interview during PDAC 2022, host Byron W King is joined by [Energy Fuels Inc.](#)'s (NYSE American: UUUU | TSX: EFR) Vice President of Marketing and Corporate Development Curtis Moore, and [Ur-Energy Inc.](#)'s (NYSE American: URG | TSX: URE) Chairman, CEO, and President John Cash

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here](#)), John and Curtis discuss world supply of uranium, which comes mostly out of Russia and Kazakhstan, and the capability of US producers to ramp up production quickly in case of increased demand or foreign supply problems. They also talk about the newly proposed, but short on details, \$4 billion US uranium support program that John Cash says will “probably be mostly focused on enrichment and conversion, but the feedstock for those two processes would likely come from domestic mines.”

Curtis talks about Energy Fuels' White Mesa Mill, the only conventional uranium mill left in the United States, which has been recently focused on rare earth elements, but he says “we're actually right now getting ready to switch over to producing uranium” as markets come back and Energy Fuels has sign a couple of long-term contracts with some US utilities.”

About Energy Fuels Inc.:

Energy Fuels is a leading U.S.-based uranium mining company, supplying U_3O_8 to major nuclear utilities. Energy Fuels also produces vanadium from certain of its projects, as market conditions warrant, and is ramping up commercial-scale production of rare earth element ("REE") carbonate. Its corporate offices are in Lakewood, Colorado, near Denver, and all its assets and employees are in the United States. Energy Fuels holds three of America's key uranium production centers: the White Mesa Mill in Utah, the Nichols Ranch in-situ recovery ("ISR") Project in Wyoming, and the Alta Mesa ISR Project in Texas. The White Mesa Mill is the only conventional uranium mill operating in the U.S. today, has a licensed capacity of over 8 million pounds of U_3O_8 per year, and has the ability to recycle alternate feed materials from third parties, to produce vanadium when market conditions warrant, and to produce REE carbonate from various uranium-bearing ores. Energy Fuels is also evaluating the potential to recover medical isotopes for use in targeted alpha therapy cancer treatments. The Nichols Ranch ISR Project is on standby and has a licensed capacity of 2 million pounds of U_3O_8 per year. The Alta Mesa ISR Project is also on standby and has a licensed capacity of 1.5 million pounds of U_3O_8 per year. In addition to the above production facilities, Energy Fuels also has one of the largest SK-1300/NI 43-101 compliant uranium resource portfolios in the U.S. and several uranium and uranium/vanadium mining projects on standby and in various stages of permitting and development.

About Ur-Energy Inc.

Ur-Energy is a uranium mining company operating the Lost Creek *in-situ* recovery uranium facility in south-central Wyoming. We have produced, packaged, and shipped approximately

2.6 million pounds U_3O_8 from Lost Creek since the commencement of operations. Ur-Energy now has all major permits and authorizations to begin construction at Shirley Basin, the Company's second *in situ* recovery uranium facility in Wyoming and is in the process of obtaining remaining amendments to Lost Creek authorizations for expansion of Lost Creek. Ur-Energy is engaged in uranium recovery and processing activities, including the acquisition, exploration, development, and operation of uranium mineral properties in the United States. The primary trading market for Ur-Energy's common shares is on the NYSE American under the symbol "URG." Ur-Energy's common shares also trade on the Toronto Stock Exchange under the symbol "URE." Ur-Energy's corporate office is located in Littleton, Colorado and its registered office is located in Ottawa, Ontario.
