

Raymond Ashley on the significant high-grade discoveries at the PLN Property driving F3 Uranium's notable success

written by InvestorNews | November 20, 2023

In a recent interview with InvestorNews, Raymond Ashley, President and Director of [F3 Uranium Corp.](#) (TSXV: FUU | OTCQB: FUUFF), discussed the Company's remarkable growth and its strategic position in the uranium sector. Ashley highlighted F3 Uranium's exceptional performance, with its market cap soaring from \$20 million to approximately \$150 million in less than a year. He attributed this success to the company's discovery and the overall interest in the uranium sector, which is currently experiencing increased global acceptance as a solution for generating base load power without greenhouse gas emissions.

Ashley emphasized the significant endorsement from [Denison Mines Corp.](#) (TSX: DML | NYSE American: DNN), which made a [strategic investment](#) in F3 Uranium. This investment is seen as a vote of confidence in F3's high-grade uranium discovery at a shallow depth in the southwest Athabasca Basin. He explained that the primary question now is the extent of the uranium deposit.

Furthermore, Ashley shed light on the use of advanced technology, such as the MobileMT Electromagnetic survey, [to explore](#) additional mineralized zones at the Patterson Lake North (PLN) property. This technology has revealed new potential zones and extended the known shear zone, indicating the possibility of more discoveries.

Regarding the PLN project's significance, Ashley noted its proximity to major uranium deposits and its potential for hosting additional mineralization along newly identified structures. He emphasized that the PLN property, being F3's flagship project, is strategically located in an area known for significant uranium discoveries and has the potential for both unconformity mineralization and sandstone-hosted components.
