

Frank Basa on Nord's high-grade silver and gold in Ontario, and rare earths in Sweden

written by InvestorNews | July 18, 2024

July 18, 2024 – In a recent InvestorNews interview with host Pat Bolland, Frank Basa, CEO and Chairman of [Nord Precious Metals Mining Inc.](#), (TSXV: NTH | OTCQB: CCWOF), shared insights into the company's high-grade silver and gold projects. Basa highlighted the profitable spinout of the Graal property into a new company, Coniagas Battery Metals Inc., providing shareholders with shares and warrants. "We've done this before, very lucrative for the shareholders of Nord," Basa noted, referencing a previous similar strategy that yielded substantial dividends.

Basa expressed excitement about Nord's recent project in Sweden, emphasizing its high-grade gold samples and rare earth elements essential for EV magnets, such as dysprosium. "Finding a property like the one in Sweden, they're really, really hard to find. The grades are astronomical," he said. The company recently [signed](#) a non-binding Letter of Intent to acquire 80% of two exploration permits in Sweden, with samples showing promising grades of gold and rare earth elements. Additionally, Basa highlighted the continued success at their Castle East project in Ontario, where recent drilling revealed significant high-grade silver, including up to 89,000 grams per ton. These discoveries and strategic acquisitions position Nord Precious Metals Mining Inc. as a promising player in the precious metals and critical minerals markets.

About Nord Precious Metals Mining Inc.

Nord Precious Metals Mining Inc. (formerly Canada Silver Cobalt Works Inc.) recently discovered a major high-grade silver vein system at Castle East located 1.5 km from its 100%-owned, past-producing Castle Mine near Gowganda in the prolific and world-class silver-cobalt mining district of Northern Ontario. The Company has completed a 60,000 m drill program aimed at expanding the size of the deposit with an update to the resource estimate underway.

In May 2020, based on a small initial drill program, the Company published the region's first 43-101 resource estimate that contained a total of 7.56 million ounces of silver in Inferred resources, comprising very high-grade silver (8,582 grams per tonne un-cut or 250.2 oz/ton) in 27,400 tonnes of material from two sections (1A and 1B) of the Castle East Robinson Zone, beginning at a vertical depth of approximately 400 meters. Note that mineral resources that are not mineral reserves and do not have demonstrated economic viability. Please refer to the Nord Precious Metals (previously Canada Silver Cobalt Works) Press Release May 28, 2020, for the resource estimate. Report reference: Rachidi, M. 2020, NI 43-101 Technical Report Mineral Resource Estimate for Castle East, Robinson Zone, Ontario, Canada, with an effective date of May 28, 2020, and a signature date of July 13, 2020.

The Company also has: (1) 14 battery metals properties in Northern Quebec where it has recently completed a nearly 16,000-metre drill program on the Graal property; and (2) St. Denis-Sangster lithium project – 260 square kilometers of greenfield

exploration ground with numerous pegmatites focussed along a significant volcanic sedimentary rock – Archean granite contact near Cochrane, Ontario contiguous to Power Metals' Case Lake Lithium properties.

Nord Precious Metal's flagship silver-cobalt Castle mine and 78 sq. km Castle property feature strong exploration upside for silver, cobalt, nickel, gold, and copper. With underground access at the fully owned Castle Mine, an exceptional high-grade silver discovery at Castle East, a pilot plant to produce cobalt-rich gravity concentrates, a processing facility (TTL Laboratories) in the town of Cobalt, and a proprietary hydrometallurgical process known as Re-20x (for the creation of technical-grade cobalt sulphate as well as nickel-manganese-cobalt (NMC) formulations), Nord Precious Metals is strategically positioned to become a Canadian leader in the silver-cobalt space.
