

# InvestorTalk Alert: Kevin Keough from Oreterra Metals Corp. to host on Thursday, July 9, 2026, at 9:00 AM EST

written by InvestorNews | July 8, 2026

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, Thursday, July 9, 2026, at 9:00 AM EST, featuring Kevin Keough, CEO and Director, [Oreterra Metals Corp.](#) (TSXV: OTMC). To participate in this engaging discussion, please [click here](#)

Oreterra Metals is an exploration company focused on gold, copper and silver, with wholly owned porphyry copper-gold prospects in British Columbia's Golden Triangle. Its key asset is the newly identified Trek South prospect, located southeast of Teck-Newmont's Galore Creek project. Following a \$9.7 million financing, Oreterra's maiden two-phase, approximately 10,000 metre drill program at Trek South is fully funded and scheduled to begin July 16, 2026, testing a 1.6 km zone of porphyry-style alteration, mineralization and geophysical anomalies. The company also plans renewed work at the JW prospect, 6 km northwest of Galore Creek, and owns Nevada's Kinkaid and Scossa properties, Ontario's Lundmark-Akow Lake project, plus NSR royalties on Hislop and Newmont Lake.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Oreterra Metals for your review, which are listed below:

- July 3, 2026 – Oreterra Geological Staff Mobilize to Trek

South Copper-Gold Prospect, Golden Triangle, BC, to Prepare for Maiden Drill Program – [click here](#)

- June 29, 2026 – Oreterra Completes Airborne Geophysical Survey of the Kinkaid Cu-Au-Ag Project, Nevada, Identifies Significant New Porphyry Target – [click here](#)
- June 18, 2026 – Oreterra Closes Sale of Option to Buy down Newmont Lake Royalty for Shares and Cash Valued at \$1.1 Million plus a Potential \$22 Million in Future Staged Cash and Advance Royalty Payments – [click here](#)

We found the June 29<sup>th</sup> news release titled, *“Oreterra Completes Airborne Geophysical Survey of the Kinkaid Cu-Au-Ag Project, Nevada, Identifies Significant New Porphyry Target”* particularly noteworthy and here are 5 key data points from it:

- **Airborne Survey Completed at Kinkaid** – Oreterra completed a low-level helicopter-borne magnetic and radiometric survey across its 100%-owned Kinkaid copper-gold-silver project in Nevada’s Walker Lane trend, identifying several large new targets.
- **New Large Porphyry Target Identified** – The survey outlined a new 1.2 km x 0.9 km potassic anomaly with a coincident magnetic low, where initial sampling returned gold values up to 7.59 g/t Au and copper values from 0.09% to >1% Cu.
- **Bismark Hill Gold Zone Expanded** – Chip sampling at Bismark Hill returned 0.87 g/t Au over 15 m, including 1.18 g/t Au over 10 m and 2.05 g/t Au over 5 m, while select nodules assayed up to 22.48 g/t Au.
- **PM Gold Zone Shows High-Grade Gold and Silver** – Follow-up sampling at PM Skarn & Gold Zone returned a property-high 31.16 g/t Au, and the exposed epithermal vein system is now believed to extend at least 200 metres.
- **Montreal Mine Trend Strengthened** – Sampling north of the

Montreal Mine traced a 1 km Cu-Au ± Ag mineralized trend, with multiple samples grading >1% Cu, gold up to 12.54 g/t Au, and silver values up to >1,000 g/t Ag.
