

InvestorTalk Alert: Kevin Keough from Oreterra Metals Corp. to host on Tuesday, March 24, 2026, at 9:00 AM EST

written by InvestorNews | March 23, 2026

InvestorNews.com is pleased to announce an upcoming InvestorTalk scheduled for tomorrow, **Tuesday, March 24, 2026, at 9:00 AM EST**, featuring **Kevin Keough, CEO and Director, [Oreterra Metals Corp.](#) (TSXV: OTMC)**. To participate in this engaging discussion, please email tracy@investornew.com to **RSVP**.

Oreterra Metals is focused on gold, copper, and silver, with key assets in British Columbia's Golden Triangle. Its flagship Trek South porphyry copper-gold prospect, located near the Galore Creek project, is fully funded for a two-phase, ~10,000 metre drill program following a recent \$9.7 million financing. The program will test a 1.6 km alteration zone with strong geophysical anomalies. Additional exploration is planned at the JW porphyry prospect. The Company also holds the Kinkaid and Scossa past-producing assets in Nevada, and the Lundmark-Akow Lake Au-Cu project in Ontario. Oreterra retains royalty interests including a 2% NSR on McEwen Mining's Hislop project and Enduro Metals' Newmont Lake project.

In preparation for tomorrow's InvestorTalk, here are some recent news releases from Oreterra Metals for your review, which are listed below:

- March 17, 2026 – Oreterra Confirms Two Broad Zones of Epithermal Gold Mineralization with Assays to 50.5 g/t Au

Overlying Porphyry Targets at the Kinkaid Project, Nevada
– [click here](#)

- March 9, 2026 – Oreterra Announces Stock Option Grant – [click here](#)
- March 5, 2026 – Oreterra Announces Closing of Final Tranche of \$9.7 Million Oversubscribed and Upsized Non-Brokered Private Placement – [click here](#)

We found the March 17th news release titled, *“Oreterra Confirms Two Broad Zones of Epithermal Gold Mineralization with Assays to 50.5 g/t Au Overlying Porphyry Targets at the Kinkaid Project, Nevada”* particularly noteworthy and here are 5 key data points from it:

1. **High-Grade Gold Results Confirmed** – Oreterra Metals Corp. reported strong assays at the Kinkaid Project, including grab samples up to **50.5 g/t Au** and chip samples up to **23.68 g/t Au**, confirming high-grade epithermal gold mineralization.
2. **Two Significant Mineralized Zones Identified** – Exploration defined two broad epithermal gold zones at Bismark Hill and PM Skarn, both showing consistent gold ± copper mineralization across multiple samples and targets.
3. **Evidence of Large Underlying Porphyry System** – Geological indicators such as sericite alteration, mercury, and antimony enrichment suggest the epithermal mineralization may overlie multiple buried porphyry Cu-Au systems.
4. **Expanding Mineralization Footprint** – Gold and copper-bearing quartz veins have been identified across a broad area, including extensions up to 200 metres from core zones, supporting a large-scale mineralized system.
5. **Advancing Toward Drill Targets** – Ongoing mapping, sampling, and planned aeromagnetic, radiometric, and IP

surveys in 2026 aim to refine targets and advance both epithermal and porphyry systems toward drill-ready status.
