### Resurgence in Investment Banking as JPMorgan Chase and Bank of America Lead the Way Amid Strong Q3 Earnings

written by Andrei Arkhanguelski | October 16, 2024 As the third-quarter earnings season unfolds, major financial institutions like JPMorgan Chase and Bank of America have unveiled results signaling a remarkable shift in the investment banking sector. The robust figures reported by these firms not only surpass market expectations but also reflect a resurgence in investment banking activities, reinforcing optimism about the industry's outlook.

#### JPMorgan Chase Sets the Tone

JPMorgan Chase & Co. (NYSE: JPM), the largest bank by market capitalization, reported a 29% year-over-year increase in its investment banking revenues, bringing in \$2.4 billion for the quarter. The surge was largely attributed to heightened activity across various investment banking products, including mergers and acquisitions (M&A) advisory, equity capital markets, and debt underwriting. This performance highlights a notable recovery in deal flow after a prolonged slump, as confidence returns to both corporate clients and investors amid stabilizing economic conditions.

The bank's overall <u>revenue</u> for Q3 2024 rose to \$42.65 billion, beating consensus estimates of \$41.65 billion. This marked a 7% increase from the previous year, driven by a combination of higher net interest income and improved performance across other business units, particularly its Asset and Wealth Management

(AWM) division. Assets under management (AUM) climbed 23% year-over-year, reaching \$3.9 trillion, showcasing the bank's ability to attract and manage wealth despite fluctuating market conditions.

JPMorgan's net income, however, slightly declined by 2% to \$12.9 billion, as the firm built up credit loss provisions amidst a changing credit environment. The 125% increase in provisions signals caution as the bank navigates the complexities of evolving macroeconomic risks, especially in consumer credit.

## Bank of America Surpasses Estimates with Strong Performance

Bank of America Corporation (NYSE: BAC) (BAC) exceeded third-quarter <u>earnings</u> estimates despite a profit decline, driven by robust performances in investment banking and trading. The bank experienced an 18% surge in investment banking fees to \$1.4 billion, reflecting strong client confidence and increased debt and equity issuances. BAC's trading revenues also saw significant growth, jumping 12% to \$4.9 billion, marking a continuation of positive trends in sales and trading.

Additionally, a resurgence in mergers and acquisitions, catalyzed by recent Federal Reserve rate cuts, further boosted advisory fees. Looking forward, BAC's net interest income is projected to rise, with expectations to reach at least \$14.3 billion in the fourth quarter, positioning the bank for sustained growth into 2025. This optimistic outlook underscores BAC's adaptability and strategic prowess in a dynamic economic environment.

#### Market Reaction and Broader Implications

Wall Street has responded positively to these early indicators,

with major indices such as the S&P 500 and Dow Jones <u>closing</u> at record highs on October 11. Investor sentiment was bolstered not only by the strong earnings reports but also by favorable inflation data, which aligned with expectations for the Federal Reserve's interest rate strategy. The resilience of corporate profits, despite elevated rates, continues to support stock valuations. Notably, the financial sector outperformed as JPMorgan shares <u>rose</u> by 4.4%, and Wells Fargo also reported better-than-expected results, seeing a 5.6% rise in its stock.

Despite these positive trends, the rising yield on 10-year Treasury bonds, which recently crossed the 4.1% mark, presents a paradox. Historically, higher yields could undermine stock prices by diverting capital towards bonds. Yet, the current optimism on Wall Street indicates that the market believes in the fundamental strength of the U.S. economy, suggesting that further gains could be on the horizon. Analysts note that while the rate-cutting cycle has begun, the interplay between rising yields and the Fed's gradual easing may create a dynamic environment for the banking sector.

# Challenges Ahead: Credit Risks and Regulatory Uncertainties

The impressive growth in investment banking revenues does not come without challenges. JPMorgan's decision to increase its credit loss provisions underscores the uncertainty surrounding credit markets, especially as economic conditions tighten. Similarly, the broader industry faces the possibility of increased regulatory scrutiny and compliance costs as governments worldwide respond to the global banking landscape's evolving risks and opportunities.

Additionally, the international outlook remains mixed. Sluggish demand in China and cautious business sentiment in Europe pose

hurdles for U.S. banks looking to expand their global footprint. For firms like Bank of America, which has a significant international presence, managing these geopolitical and macroeconomic headwinds will be crucial in maintaining growth trajectories.

#### Outlook for Q4 and Beyond

The recent earnings reports from major banks offer an optimistic view for the remainder of 2024. If deal flow continues to recover and corporate clients maintain their demand for capital-raising services, investment banking could remain a bright spot. Analysts predict that the sector's rebound may extend into 2025 as companies adapt to the new interest rate environment and economic growth stabilizes.

With earnings from other major players like The Goldman Sachs Group, Inc. (NYSE: GS) and Morgan Stanley (NYSE: MS) still to be reported, the full picture of the investment banking landscape will become clearer. For now, Wall Street appears to be navigating the complexities of this financial cycle with a cautiously optimistic approach.

In conclusion, the resurgence in investment banking revenues, highlighted by JPMorgan Chase's stellar performance, signals that the industry is on the path to recovery. However, vigilance is necessary as credit risks and regulatory changes loom on the horizon. The upcoming earnings releases and macroeconomic indicators will play a decisive role in shaping the sector's outlook, as both investors and analysts closely monitor these developments.
