

Canada Cobalt Works Scheduled to Present in the Corporate Presentation Forum at PDAC 2019

written by Raj Shah | February 25, 2019

TSXV: CCW
OTCQB: CCWOF

February 25, 2019 ([Source](#)) – Canada Cobalt Works Inc. (TSXV: CCW) (OTC: [CCWOF](#)) (Frankfurt: 4T9B) (the “Company” or “Canada Cobalt”) is pleased to announce that President and CEO Frank J. Basa is scheduled to make a presentation to investors as

part of the Corporate Presentation Forum at PDAC 2019 in Toronto.

The presentation will be in the Energy Metals and Specialty Products session on Tuesday March 5 at 11:15 am Eastern in Room 803 in the South Building of the Metro Toronto Convention Centre.

Mr. Basa’s presentation will focus on Canada Cobalt’s recent high-grade drill results, a recent apparent gold system discovery, its plans to bring the cobalt-silver Castle Mine back into production and the technological lead that the Company has achieved with its environmentally green Re-20X hydrometallurgical process, which has been demonstrated in lab tests to produce cobalt sulphate to the specifications required by electric battery manufacturers without the need for smelting.

Mr. Basa will be available for questions after the presentation and also will meet with investors during PDAC at Booth 2738 in

the Investors Exchange exhibit area on the 800 level in the South Building.

Canada Cobalt Works was recently ranked by the TSX among the Top 5 Mining Companies in its 2019 Venture 50 listing of top-performing companies on the TSX Venture Exchange. The Company regards this ranking as a validation of the strategy it has pursued towards building a vertically integrated mining company – from mining and milling through to the production of cobalt and other sulphates that meet the electric-car manufacturers' requirements for conflict-free cobalt they want for their electric-car batteries.

About Canada Cobalt Works Inc.

Canada Cobalt is a pure play cobalt company focused on its past producing Castle mine in the Northern Ontario Cobalt Camp, Canada's most prolific cobalt district. With underground access at Castle, a recently installed pilot plant to produce cobalt-rich gravity concentrates on site, and a proprietary hydrometallurgical process known as Re-20X for the creation of technical grade cobalt sulphate as well as nickel-manganese-cobalt (NMC) formulations, Canada Cobalt is strategically positioned to become a vertically integrated North American leader in cobalt extraction and recovery.
