

F3 Announces Commencement of Drilling at PLN

written by Raj Shah | January 23, 2024

January 23, 2024 ([Source](#)) – **F3 Uranium Corp. (TSXV: FUU) (OTCQB: FUUFF)** (“F3” or the “Company”) is pleased to announce that drilling has commenced for the 2024 winter drill campaign on its 100%-owned Patterson Lake North (“PLN”) Project.

The drill program focuses initially on the JR Zone and the B1 Area, located 3km south of the JR Zone. One diamond drill is coring a follow up drill hole on the JR Zone (at the north end of A1), on one of the five casings that were set at the end of the fall drill program. A second diamond drill crew is also on site and will begin to set up at the B1 Area on a new casing that has just been set by the sonic drill. Many of the hallmarks commonly associated with uranium mineralization were recognized in the fall drilling in the B1 Area, highlighting its strong potential. These include extensive structural complexity and large-scale sandstone and basement alteration accompanied by anomalous boron in the lower sandstone and uranium values in the basement (see news release dated January 8, 2023). Drill targets at the B1 Area are being developed through the integration of 3D-DCIP ground resistivity that is nearing completion, along with ground EM data and drill core geochemistry.
