

F3 Drills 2.0m of 20.6% U₃O₈ Within 7.56% over 5.5m at JR Zone and Encounters Strongly Anomalous Boron in Sandstone at A1B

written by Raj Shah | November 27, 2023

November 27, 2023 ([Source](#)) – F3 Uranium Corp (TSXV: FUU) (OTCQB: FUUFF) (“F3” or “the Company”) is pleased to announce additional assay results for the ongoing drill program, including PLN23-086 (see NR dated August 14, 2023) which returned 5.5m of 7.56 % U₃O₈, including an **ultra-high grade 2.0m interval averaging 20.6% U₃O₈**. At the A1B area, drill hole PLN23-093 encountered a 2.0m interval averaging 5,557 ppm Boron in highly altered Athabasca Sandstone, approximately 17m from the unconformity along the A1B shear.

Sam Hartmann, VP Exploration commented:

“In addition to high grade assay intercepts reported in the JR Zone, we are pleased to discuss our first geochemical exploration drilling results from the A1B area; drill hole PLN23-093, where intense sandstone and basement alteration was previously reported, returned a 2.0m interval with significant individual boron values between 3,000 and 10,000 ppm. Boron values over 5,000 ppm, associated with dravite veining and breccias, have previously only been intersected on the property within Athabasca Sandstone immediately above the JR Zone, 3.5 km away.

“PLN23-095, which was a deeper target intercept approximately

800m grid north of PLN23-093, previously reported anomalous radioactivity up to 300 cps within a fault system related to the A1B conductor; this returned basement hosted uranium values up to 58 ppm. To put that into context, PLN23-071 (see NR dated July 17, 2023) on line 165S returned a maximum of 51 ppm uranium in the A1 shear, 45m along strike away from high grade mineralization within the JR Zone. It is our view that in comparison to the JR Zone, the A1B system represents an area of widespread structural complexity, with evidence of significant re-activated reverse structures extending into the sandstone. With this complexity also comes opportunity and I see the A1B shear area among the most prospective places to make the next discovery, considering these first geochemistry results. Going forward we will refer to the A1B shear zone as B1 to differentiate it more clearly from the A1 shear zone, as a separate structure.”

Assay Highlights

PLN23-086 (line 045S): mineralized intervals

- 2.5m @ 0.18% U_3O_8 (221.5m to 224.0m), and
- 5.5m @ 7.56% U_3O_8 (229.5m to 235.0m), including
- 2.0m @ 20.6% U_3O_8 (232.0 m to 234.0m), further including:
- 0.5m @ 35.7% U_3O_8 (232.5 m to 233.0m)

Main JR Zone Intercepts

PLN23-084 (line 075S): mineralized intervals

- 12.5m @ 0.39% U_3O_8 (232.0m to 244.5m), including
- 1.0m @ 2.22% U_3O_8 (237.5m to 238.5m), and

PLN23-090 (line 120S): mineralized intervals

- 10.0m @ 1.29% U₃O₈ (232.0m to 242.0m), including
- 2.5m @ 4.33% U₃O₈ (239.0m to 241.5m)

PLN23-097 (line 045S): mineralized intervals

- 13.0m @ 1.34% U₃O₈ (210.0m to 223.0m), including
- 4.5m @ 3.52% U₃O₈ (215.5m to 220.0m)

Exploration Drilling Highlights:

PLN23-093 (line 3450S), B1 Area (formerly A1B):

- 2.0m @ 5,557 ppm boron (354.5m to 356.5m) in sandstone, including
- 0.5m @ 10,800 ppm boron (355.0m to 355.5m)

PLN23-095 (line 2610S), B1 Area (formerly A1B):

- 24.5m @ 25 ppm uranium (602.0m to 626.5m) in basement, including
- 3.5m @ 41 ppm uranium (604.5m to 608.0m), further including
- 0.5m @ 58 ppm uranium (607.5m to 608m)

Table 1. Drill Hole Summary and Uranium Assay Results

Collar Information							Assay Results			
Hole ID	Grid Line	Easting	Northing	Elevation	Az	Dip	From (m)	To (m)	Interval (m)	U3O8 weight %

Assay composite parameters:

1: Minimum Thickness of 0.5 m

2: Assay Grade Cut-Off: 0.05% U₃O₈ (weight %)

3. Maximum Internal Dilution: 2.0 m

Composited weight % U_3O_8 mineralized intervals are summarized in Table 1. Samples from the drill core are split in half sections on site. Where possible, samples are standardized at 0.5m down-hole intervals. One-half of the split sample is sent to SRC Geoanalytical Laboratories (an SCC ISO/IEC 17025: 2005 Accredited Facility) in Saskatoon, SK while the other half remains on site for reference. Analysis includes a 63-element suite including boron by ICP-OES, uranium by ICP-MS and gold analysis by ICP-OES and/or AAS.

The Company considers uranium mineralization with assay results of greater than 1.0 weight % U_3O_8 as “high grade” and results greater than 20.0 weight % U_3O_8 as “ultra-high grade”.

All depth measurements reported are down-hole and true thickness are yet to be determined but the Company estimates true thickness of the reported intervals in this news release to be close to reported interval widths.

About Patterson Lake North

The Company's 4,078-hectare 100% owned Patterson Lake North property (PLN) is located just within the south-western edge of the Athabasca Basin in proximity to Fission Uranium's Triple R and NexGen Energy's Arrow high-grade world class uranium deposits which is poised to become the next major area of development for new uranium operations in northern Saskatchewan. PLN is accessed by Provincial Highway 955, which transects the property, and the new JR Zone uranium discovery is located 23km northwest of Fission Uranium's Triple R deposit.

Qualified Person

The technical information in this news release has been prepared

in accordance with the Canadian regulatory requirements set out in National Instrument 43-101 and approved on behalf of the Company by Raymond Ashley, P.Geo., President & COO of F3 Uranium Corp, a Qualified Person. Mr. Ashley has verified the data disclosed.

About F3 Uranium Corp.

F3 Uranium is advancing the newly discovered high-grade JR Zone on the PLN Property in the Western Athabasca Basin. This area of Saskatchewan is poised to become a major uranium producing region and is home to large deposits including Triple R, Arrow and Shea Creek. F3 Uranium currently holds 18 projects across the Athabasca Basin.

Forward-Looking Statements

This news release contains certain forward-looking statements within the meaning of applicable securities laws. All statements that are not historical facts, including without limitation, statements regarding future estimates, plans, programs, forecasts, projections, objectives, assumptions, expectations or beliefs of future performance, including statements regarding the suitability of the Properties for mining exploration, future payments, issuance of shares and work commitment funds, entry into of a definitive option agreement respecting the Properties, are "forward-looking statements." These forward-looking statements reflect the expectations or beliefs of management of the Company based on information currently available to it. Forward-looking statements are subject to a number of risks and uncertainties, including those detailed from time to time in filings made by the Company with securities regulatory authorities, which may cause actual outcomes to differ materially from those discussed in the forward-looking statements. These factors should be considered carefully and

readers are cautioned not to place undue reliance on such forward-looking statements. The forward-looking statements and information contained in this news release are made as of the date hereof and the Company undertakes no obligation to update publicly or revise any forward-looking statements or information, whether as a result of new information, future events or otherwise, unless so required by applicable securities laws.

The TSX Venture Exchange and the Canadian Securities Exchange have not reviewed, approved or disapproved the contents of this press release, and do not accept responsibility for the adequacy or accuracy of this release.
