Fission 3.0 and Traction Drilling Intersects Anomalous Radioactivity at Lazy Edward Bay

written by Raj Shah | May 31, 2022
May 31, 2022 (Source) - Fission 3.0 Corp. (TSXV: FUU) (OTCQB: FISOF) ("Fission 3") and Traction Uranium Corp. ("Traction") are pleased to provide an update of the drilling at the Lazy Edward Bay project in the SE Athabasca Basin region which commenced on May 17, 2022. Drilling on the Horse West conductor has encountered anomalous radioactivity in drill hole LEB22-004 near the sandstone-basement unconformity at 164.6 m associated with a reverse fault.

Hole LEB22-004 is the fourth hole to be completed during the ongoing summer drilling program and intersected elevated radioactivity associated with a reverse fault at the unconformity from 163.50 to 164.0 m with a maximum of 430 cps, measured on the drill core with a handheld Radiation Solutions RS-125 scintillometer. This corresponds with a peak of 1320 cps on the borehole gamma probe within a 1.6m interval from 162.56 m to 164.16 m greater than 500 cps. These results confirm what has been reported by Uranerz Exploration and Mining Limited in historic drill hole LE-73 drilled in 1989. Geochemical analyses by Uranerz showed that the radiometric anomalies encountered in LE-73 near the unconformity were predominantly caused by high thorium contents, but they were also accompanied with elevated uranium values (170.4 m to 170.6 m of 40 ppm U and 733 ppm Th).

Follow up hole LEB-005 down dip of this intersection is in progress to test the footwall where the reverse fault intersects

the basement, which is a similar setting to the occurrence of the McArthur River uranium mine.

Natural gamma radiation in drill core that is reported in this news release was measured in counts per second (cps) using a handheld Radiation Solutions RS-125 scintillometer. Natural gamma radiation in the drill hole surveys that are reported in this news release was measured in counts per second (cps) using a Mount Sopris Instruments QL40-GRA borehole gamma probe. The reader is cautioned that scintillometer readings are not directly or uniformly related to uranium grades of the rock sample measured and should be used only as a preliminary indication of the presence of radioactive materials. All intersections are down-hole. All depths reported of core interval measurements of radioactivity are not always representative of true thickness.

Qualified Person

The technical information in this news release has been prepared in accordance with the Canadian regulatory requirements set out in National Instrument 43-101 and reviewed on behalf of the company by Raymond Ashley, P.Geo., Vice President, Exploration of Fission 3.0 Corp., a Qualified Person.

About Fission 3.0 Corp.

Fission 3 is a uranium project generator and exploration company, focusing on projects in the Athabasca Basin, home to some of world's largest high grade uranium discoveries. Fission 3 currently has 16 projects in the Athabasca Basin. Several of Fission 3's projects are near large uranium discoveries, including, Arrow, Triple R and Hurricane deposits. Fission 3 is currently planning a winter exploration/drill program on its PLN project.

About Traction Uranium Corp

Traction Uranium (CSE: TRAC) (OTC: TRCTF) (FSE: Z1K) is in the business of mineral exploration and the development of discovery prospects in Canada, including its two flagship uranium projects in the world-renowned Athabasca Region.

We invite you to find out more about our exploration-stage activities across Canada's Western region at www.tractionuranium.com.

Forward Looking Statements

This news release contains certain forward-looking statements within the meaning of applicable securities laws. All statements that are not historical facts, including without limitation, statements regarding future estimates, plans, programs, forecasts, projections, objectives, assumptions, expectations or beliefs of future performance, including statements regarding the suitability of the Properties for mining exploration, future payments, issuance of shares and work commitment funds, entry into of a definitive option agreement respecting the Properties, are "forward-looking statements." These forward-looking statements reflect the expectations or beliefs of management of the Company based on information currently available to it. Forward-looking statements are subject to a number of risks and uncertainties, including those detailed from time to time in filings made by the Company with securities regulatory authorities, which may cause actual outcomes to differ materially from those discussed in the forward-looking statements. These factors should be considered carefully and readers are cautioned not to place undue reliance on such forward-looking statements. The forward-looking statements and information contained in this news release are made as of the date hereof and the Company undertakes no obligation to update publicly or revise any forward-looking statements information, whether as a result of new information, future events or otherwise, unless so required by applicable securities laws.

The TSX Venture Exchange and the Canadian Securities Exchange have not reviewed, approved or disapproved the contents of this press release, and do not accept responsibility for the adequacy or accuracy of this release.
