

Fission 3.0 Corp. Receives \$1.5M from Traction Uranium

written by Raj Shah | May 24, 2022

May 24, 2022 ([Source](#)) – **Fission 3.0 Corp. (TSXV: FUU) (OTCQB: FISOF)** (“**Fission 3**”) is pleased to announce it has received \$1.5 million from Traction Uranium Corp. (“Traction”) in regards to the Option Agreement with Traction for the Lazy Edward Bay property , comprised of 7 mineral claims covering approximately 11,173 hectares. The drilling/exploration program started on May 17th.

The budget for the program is set at \$1.5M with plans to drill 8 diamond drill holes totalling approximately 2000 m to follow up on historic drilling results with several indicators for uranium mineralization. Located near the southern edge of the Athabasca Basin, the targets are at relatively shallow depths, with the Athabasca sandstone ranging to depths of approximately 150 m where present.

Traction will fund the work program and Fission 3 will conduct the work program in accordance with the terms of the Option Agreement between Fission 3 and Traction, whereby Traction can acquire up to a 70% interest in the Lazy Edward Bay property. (see Dec 10, 2021 Fission 3 news release.)

The Lazy Edward Bay property is located halfway between Cameco’s Key Lake Mine and the high grade Centennial uranium deposit, and hosts NE-trending conductive corridors similar to those associated with Key Lake and Centennial. The major uranium deposits in the eastern Athabasca Basin, including Key Lake, McArthur River and Cigar Lake, are along the NE-trending Wollaston-Mudjatik transition zone and conductive corridor. To

the west of the property, the Centennial deposit is localized along the NE-trending Virgin River conductive corridor which transects the entire Athabasca Basin. The Key Lake mine, located ~50 km to the east of the property is accessible by Provincial Highway 914, serviced by the provincial power grid, and has an operating mill where the McArthur River ore has been processed.

Fission 3 summer drilling is planned along section, and along strike from encouraging historic drilling results, including anomalous uranium geochemistry, by Uranerz Exploration and Mining Limited in the 1980's and JNR Resources Inc. in the 2000's. The two main NE -trending conductive corridors on the property are referred to as the western Horse Trend and the eastern Liberty Trend. The western portion of the property captures most of the conductive Horse Trend.

Qualified Person

The technical information in this news release has been prepared in accordance with the Canadian regulatory requirements set out in National Instrument 43-101 and reviewed on behalf of the company by Raymond Ashley, P.Geo., Vice President, Exploration of Fission 3.0 Corp., a Qualified Person.

About Fission 3.0 Corp.

Fission 3 is a uranium project generator and exploration company, focusing on projects in the Athabasca Basin, home to some of world's largest high grade uranium discoveries. Fission 3 currently has 16 projects in the Athabasca Basin. Several of Fission 3's projects are near large uranium discoveries, including, Arrow, Triple R and Hurricane deposits. Fission 3 is currently planning a winter exploration/drill program on its PLN project.
