# Goldplay Announces Further Sampling Results from San Marcial Historical Core; Confirms Open Pit Target Near Surface with 46.0 Meters @ 129 gpt AgEq

written by Raj Shah | August 28, 2018

August 28, 2018 (Source) – **Goldplay Exploration Ltd. (TSXV: GPLY, OTCQB: GLYXF – the "Company" or "Goldplay")** is pleased to announce additional results from sampling of the historical core drill holes completed in 2010, on the Company's San Marcial Project in Mexico. The core sampling program continues to successfully identify an attractive, wide, near surface high-grade mineralized zone hosted in hydrothermal breccias close to major geological structures.

A 0.5 m intercept from SM-10-06 returned an excellent result of 2,384 gpt AgEq, within a wider 46.0 m silver mineralized zone. Other highlights of the sampling from drill holes SM-10-06 and SM-10-21 include:

- SM-10-06, 46.0 meters @ 129 gpt AgEq
  - **Including 7.5 meters @ 379 gpt AgEq**
  - **Including 1.5 meters @ 1,079 gpt AgEq**
- SM-10-21, 17.5 meters @ 239 gpt AgEq

The following table summarizes the most significant drill results (uncut) from SM-10-06 and SM-10-21 for this news release.

| Hole No. | From (m) | To (m) | Interval (m) | True Width (m) | Ag g/t | Pb % | Zn % | AgEq* g/t |
|---|---|---|---|---|---|---|---|---|
| SM-10-06 | 148.7 | 194.7 | 46.0 | 46.0 | 89 | 0.3 | 0.5 | 129 |
| Including | 154.5 | 162.0 | 7.5 | 7.5 | 334 | 0.4 | 0.6 | 379 |
| Including | 158.5 | 161.0 | 1.5 | 1.5 | 989 | 1.2 | 0.9 | 1079 |
| Including | 160.5 | 161.0 | 0.5 | 0.5 | 2,180 | 3.3 | 1.5 | 2,384 |
| SM-10-21 | 24.6 | 42.5 | 17.5 | 17.5 | 89 | 0.3 | 0.5 | 239 |

Note: all numbers are rounded.

AgEq (silver equivalent) is calculated from gpt data. AgEq g/t = Ag g/t + Au g/t x (Ag Price per oz/ Au price per oz) + (Pb grade x ((Pb price per lb./Ag price per oz) x 0.0685714 lbs. per Troy Ounce x 10000 g per %)) +(Zn grade x ((Zn price per lb./Ag price per oz) x 0.0685714 lbs. per Troy Ounce x 10000 g per %)). Ag price per oz (US$16.50), Au price per oz (US$1250/oz), Pb price per lb. (US$0.95) and Zn price per lb. (US$1.15) and 100% Metallurgical Recovery.

**Goldplay President and CEO Marcio Fonseca commented**, “Goldplay’s systematic sampling of 22 existing core drill holes (previously only partially sampled) is confirming the upside potential for resource expansion, while delineating mineralized zones wide enough to support a high-grade bulk mineable open pit target at the San Marcial Project. The sampling program is progressing with pending results expected to lead to an updated resource estimation by the December quarter of 2018.

The location of drill holes completed prior to the historical resource and the location of sampled drill holes SM-10-06 and SM-10-21 are illustrated as follows (Figure 1).

The sampling of SM-10-06 and SM-10-21 has confirmed the continuity of high grade silver mineralization with anomalous

values for lead and zinc. The mineralization is not only close to major structures but also in a wide and continuous hydrothermal breccia unit. In anticipation of a new resource estimate in the December quarter 2018, the company is advancing the geological/ geochemical and structural modelling of the mineralized zones with the objective of defining additional targets for down dip and along strike drilling upon receipt of drilling permits.

## QA/QC Protocols

Thorough QA/QC protocols are followed in all sampling programs and in assays completed by the Company. Goldplay's management includes routine duplicates, blanks and standard samples in assay lots for all surface and drill hole samples. The samples are submitted directly to the SGS laboratory facilities in Durango, Mexico, for sample preparation and assaying. The assaying at SGS is by Fire Assay with AA finish, for Au (> 10 ppm gravimetric finish), Ag ICP-AES with 4 acid digestion (up to 100 ppm). For Ag results over 100 ppm an ICP-AES 4 acid digestion with detection limit from 100-1,000 g/t is completed at SGS laboratories in Vancouver, Canada. For samples with over limits of Zn and Pb (>10,000 ppm), an ICP-AES with Sodium Peroxide Fusion is performed, to improve recovery.

The Qualified Person under the NI 43-101 Standards of Disclosure for Mineral Projects for this news release is Marcio Fonseca, President and CEO of Goldplay, who has reviewed and approved its contents.

**About Goldplay Exploration Ltd**.

Goldplay owns a >250 sq. km exploration portfolio in the historical Rosario Mining District, Sinaloa, Mexico. Goldplay's current exploration focus includes surface exploration and drilling, with a resource update to follow at the advanced-stage San Marcial Project and follow up exploration program at the El Habal Project.

The San Marcial land package consists of 1,250 ha, located south of the La Rastra and Plomosas historical mines and 20 km from the Company's 100% owned El Habal Project in the Rosario Mining District, Sinaloa, Mexico. San Marcial is an attractive, near-surface high-grade silver, lead and zinc project for which a historical resource estimate has been previously disclosed.

San Marcial exhibits significant exploration upside supported by regional exploration programs completed by previous operators who identified 14 exploration targets similar to San Marcial within its 100% Goldplay-owned concessions. Some of these exploration targets consist of old shallow pits, caved shafts and historical underground workings in areas with extensive hydrothermal alteration, hosted by major regional structures.

The El Habal Project is a drilling stage project with an ongoing drill program. The oxidized gold mineralized zone outcrops along a series of rolling hills with evidence of historical shallow underground mining along a 6 km long prospective corridor. The El Habal Project is located near the historical gold-silver Rosario Mine which reportedly operated for over 250 years. Goldplay's team has over 30 years of experience with senior roles in exploration, financing, and development in the mining industry, including over ten years of extensive exploration experience in the Rosario Mining District, leading to previous successful discoveries. A current NI 43-101 report on the El

Habal Project is filed on SEDAR.
