

Imperial Mining Commences Exploration on its Opawica Gold Project, Northwestern Quebec

written by Raj Shah | August 8, 2018

August 8, 2018 ([Source](#)) – Imperial Mining Group Ltd. (“Imperial”) (TSX VENTURE:IPG) is pleased to announce the start of its 2018 exploration program on the 100% owned Opawica Gold project in the Abitibi region of northwestern Québec (Figure 1).

Opawica Project Location Map, Quebec

The \$150,000 program will focus on extending known gold and silver mineralization along a NE-striking, 75-100 m wide deformation corridor hosting several highly altered shear zones. The shear zones are mineralized with quartz-carbonate-sulphide veins and veinlets containing strong gold and silver values with occasional visible gold (“VG”). Previous work on the property identified a 350 m long gold-bearing zone in the central part of the property which was never drill-tested below the 150 m vertical level.

The best historical diamond drilling results from this structure include (Figure 2):

Opawica Gold Project Compilation Map

Table 1 – Opawica Project, Quebec: Best Historical Diamond Drill Intersections

Hole #	Company	Year	Length (m)	Grade (g/t Au)
Q0-2	Quebec S&R*	1959	3.0	3.2
Q0-5	Quebec S&R*	1959	3.8	6.9
Q0-9	Quebec S&R*	1959	2.8	5.1
23-4	Falconbridge	1983	2.0	5.1
23-5	Falconbridge	1984	0.8	23.7
23-11	Falconbridge	1985	1.5	87.7 (VG)

**Quebec Smelting and Refining Ltd.*

There has been very little exploration drilling west of this gold zone and the host shear zone structure is open at depth and along strike to the west for at least 1.5 km. The summer work program will involve geological and geophysical surveys to define targets for a winter drilling program.

“The Opawica project offers Imperial and its shareholders an opportunity to evaluate the economic potential of a relatively unexplored gold property in rocks we believe to be the western extension of the Joe Mann Mine horizon in the Chibougamau gold-copper camp,” said Imperial’s President & CEO, Peter Cashin. “The Joe Mann Mine produced nearly one million ounces of gold and byproduct copper since the 1950s and returned some of the highest average gold grades of any mine on Quebec’s side of the Abitibi Greenstone Belt.”

Opawica Gold Property Exploration Plans

The Opawica gold property is located 20 km east of Desmaraisville and is accessible via Highway 113 from Val d’Or to Chibougamau, Quebec, and by a network of forestry roads.

The property lies within a major regional NE-SW deformation corridor that hosts several gold occurrences and some former gold producers, including the Joe Mann mine (**historical past-**

production 4.8Mt @ 7.56 g/t Au) and the Bachelor Lake mine (**historical past-production 870,000t @ 4.66 g/t Au**) located 90km to the east and 20km to the west, respectively. The property straddles a major geological contact between the mafic volcanic rocks of the Obatogamau Formation and the felsic volcanic rocks of the Wachigabau Member. This contact is host to a 75-100 m wide deformation corridor consisting of several shear zones with strong, pervasive carbonate, sericite, and fuchsite alteration with disseminated pyrite and several quartz veinlets with gold and silver mineralization and occasional visible gold (VG).

The summer work program will consist of 30 line-km of line-cutting, 26 line-km of high resolution Ore Vision™ 3-D induced polarization (3D-IP) geophysics and a geological mapping program on known high-grade gold-bearing structures on the property (Figure 3). Crews have been mobilized to the property and this work is anticipated to be completed by September 2018. Diamond drilling of the best targets identified by the program is planned for the late fall or winter period.

Proposed Gridding, Geophysics and Mapping, Opawica Gold Project, Quebec

ABOUT IMPERIAL MINING GROUP LTD.

Imperial is a new Canadian mineral exploration and development company focused on advancing its copper-zinc, gold and technology metals properties in Québec. Imperial is publicly listed on the TSX Venture Exchange as "IPG" and is led by an experienced team of mineral exploration and development

professionals with a strong track record of mineral deposit discovery in numerous metal commodities.

This press release may contain forward-looking statements relating to the Company's operations or to its business environment. Such statements are based on the Company's operations, estimates, forecasts, and projections, but are not guarantees of future performance and involve risks and uncertainties that are difficult to predict or control. Several factors could cause actual outcomes and results to differ materially from those expressed. These factors include those set forth in the corporate filings. Although any such forward-looking statements are based upon what management believes to be reasonable assumptions, the Company cannot guarantee that actual results will be consistent with these forward-looking statements. In addition, the Company disclaims any intention or obligation to update or revise any forward-looking statements, for any reason. We also do not commit in any way to guarantee that we will continue reporting on items or issues that arise. Investors are cautioned that this press release contains quoted historical exploration results. These are derived from filed assessment reports and compiled from governmental databases. The Company and a QP have not independently verified and make no representations as to the accuracy of historical exploration results: these results should not be relied upon. Selected highlight results may not be indicative of average grades.
