

Kraken Energy Commences Drilling Program at Flagship Apex Uranium Property, Nevada

written by Raj Shah | November 15, 2023

Priority Drill Targets Significantly Expand the Mineralized Trend Along Strike from the Past-Producing High-Grade Uranium Apex Mine

November 15, 2023 ([Source](#)) – Kraken Energy Corp. (CSE: UUSA) (OTCQB: UUSAF) (the “Company” or “Kraken Energy”) is pleased to report that it has commenced the inaugural drill program at its 100%-owned, past-producing flagship Apex Uranium Property (“Apex” or the “Property”) located in central Nevada.

The 2,200-meter (“m”) drilling program will target a mineralized area over 2 kilometers (“km”) in strike length consisting of two separate target areas immediately along strike from the past-producing Apex Mine. The Company has received approval to initially drill up to 2,200 m (7,217 ft) in 24 holes from 8 pads.

“We are very excited to begin drilling at Apex, where historic drilling features results of up to 34.1 m (112 ft) at 0.37% U3O8 and 15.2 m (50 ft) at 0.51% U3O8,” stated Matthew Schwab, CEO of Kraken. “With radon anomalies now over 5 times larger than the footprint of the Apex Mine, our team is confident in the priority targets outlined for this maiden drilling program on the property.”

Highlights:

- Priority drill targets over strong radon anomalies

coincide with geophysical signatures outlining the mineralized contact at the historic Apex Uranium Mine.

- The BLM has approved permit to drill up to 2,200 m (7,217 ft) in 24 holes from 8 pads.
- Interpretation of the recently flown VTEM and UAV magnetic surveys shows a geophysical signature associated with uranium mineralization at the Apex Mine that appears to be offset to the north where it continues trending northwest. This geophysical signature coincides with strong and consistent, recently identified radon anomalies.
- Over 2 km of new high priority target potential has been identified on the recently staked BLM ground that follows the northwest mineralized trend from the Apex Mine.
- Newly defined and previously undrilled target area with projected target depths ranging from 50 m to 200 m (164 ft to 656 ft).

About the Apex Property:

The Apex Uranium Mine was Nevada's largest past-producing uranium mine which produced ~106,000 pounds of U_3O_8 in the 1950s at an average mining grade of ~0.25% U_3O_8 . Historic drilling results include results of up to 3.1 m (10 ft) at 1.33% U_3O_8 , 34.1 m (112 ft) at 0.37% U_3O_8 and 15.2 m (50 ft) at 0.51% U_3O_8 .

Technical Information:

All scientific and technical information in this news release has been prepared by or reviewed and approved by Matthew Schwab, P.Geo., President and CEO of the Company, and Garrett Ainsworth, P.Geo., Chairman of the Company. Each of Mr. Schwab and Mr. Ainsworth is a Qualified Person for the purposes of National Instrument 43-101 – Standards of Disclosure for Mineral

Projects.

The data disclosed in this news release is related to historical drilling results. Kraken has not undertaken any independent investigation of the sampling, nor has it independently analyzed the results of the historical exploration work in order to verify the results. Kraken considers these historical drill results relevant as the Company is using this data as a guide to plan exploration programs. The Company's current and future exploration work includes verification of the historical data through drilling.

About Kraken Energy Corp.:

Kraken Energy Corp. is a new energy company advancing its portfolio of high-grade uranium properties in the United States. The Company is advancing its 100%-owned Apex Uranium Property, located 280 km (174 miles) east from Reno, Nevada which is recognized as Nevada's largest past-producing uranium mine. The Company has additionally entered into an option agreement to earn 100% of the Garfield Hills Uranium Property. The past-producing Garfield Hills Uranium Property covers 1,238 ha (3,060 acres) and is located 19 km (12 miles) east of Hawthorne in Mineral County, Nevada. Kraken Energy has also recently staked the Huber Hills Uranium Property, located 136 km (85 miles) north of Elko, Nevada which covers 1,044 ha (2,580 acres) and encompasses the historic Race Track open pit mine. The Company has recently entered into an option agreement to earn 75% of the Harts Point Uranium Property. The Harts Point Uranium Property covers 2,622 ha (6,480 acres) and is located 49 km (30 miles) northwest of Monticello in San Juan County, Utah.

This news release contains forward-looking information which is subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ from those projected in the forward-looking statements. Forward-looking statements in this press release include our plans for exploration at the properties. These forward-looking statements are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward-looking information. Risks that could change or prevent these statements from coming to fruition include changing costs for mining and processing; increased capital costs; the timing and content of upcoming work programs; geological interpretations based on drilling that may change with more detailed information; potential process methods and mineral recoveries assumption based on limited test work and by comparison to what are considered analogous deposits that with further test work may not be comparable; the availability of labour, equipment and markets for the products produced; and despite the current expected viability of the project, conditions changing such that the minerals on our property cannot be economically mined, or

that the required permits to build and operate the envisaged mine can be obtained. The forward-looking information contained herein is given as of the date hereof and the Company assumes no responsibility to update or revise such information to reflect new events or circumstances, except as required by law.
