1Note: the lengths reported are core lengths and not true widths. The Company has insufficient information to determine the attitude, either of the ultramafic body or of mineralized zones within it. True widths will be less than the core lengths by unknown factors.

The 2018 drilling program by Spruce Ridge and its Joint Venture partner, a group of private investors, was focussed on the Crawford Ultramafic Complex, a 3.5-kilometre long body of peridotite, dunite and their serpentinitized equivalents. The target was defined by a helicopter-borne magnetic and electromagnetic survey and an airborne gravity survey, both conducted over of the entire project area of 100 sq. km. An Artificial Intelligence (A.I.) review of data, provided by Albert Mining Inc. (TSX-V AIIM), also identified the area as being prospective for nickel.
