

Noble Signs Option and Joint Venture Agreement with Spruce Ridge on Project 81 – Crawford Township Property

written by Raj Shah | May 8, 2018

TSXV: NOB

May 8, 2018 ([Source](#)) – Noble Mineral Exploration Inc. (“Noble”) is pleased to announce that it has signed an Option and Joint Venture Agreement with Spruce Ridge Resources Ltd. (TSXV: SHL) (“Spruce Ridge” or the “Company”) to earn a 75 percent

interest in the Crawford Township Property (the “Crawford Property”) on specific target areas having a size of up to 2000 hectares. The Crawford Property, comprises part of Noble’s ~70,000 hectare Project 81.

The Crawford Property lies approximately 14 kilometres north of Glencore Canada’s world class Kidd Creek zinc-copper-silver mine, currently celebrating its 50th year of continuous operation. The property is underexplored and there is a high potential to find another world class VMS and/or Nickel-Cobalt mineral deposit.

Compilation completed by ORIX Geoscience Inc. over the Crawford Property has identified several historical INCO drill holes with significant Nickel assays results. (See Table below). Drill-hole 25050 intersected 433.43 metres of serpentized peridotite with continuous nickel mineralization grading 0.25%Ni. The hole ended in nickel-bearing peridotite. Drill hole 27095, drilled approximately 200 metres north east of 25050 intersected 236.2

metres of continuous nickel mineralization grading 0.34%Ni. A third drill hole (27064) drilled approximately two kilometres away intersected 253.4 metres of continuous nickel mineralization grading 0.24% Ni. Nickel grades reported by INCO set out below are historical and non NI 43-101 compliant:

Historical INCO Drill Results from 1966

Hole Number	From (m)	To (m)	Length (m)	Percent Nickel
25050	39.62	172.21	132.59	0.34%
	39.62	384.05	344.43	0.28%
	39.62	473.05	433.43	0.25%
	39.62	502.31	462.69	0.25%
27095	37.2	273.4	236.2	0.34%
27064	165.7	419.1	253.4	0.24%
	419.7	470	50.3	0.14%

The nickeliferous peridotite is reported to be sheared and highly serpentized, meaning that there is a reasonable prospect that much of the nickel has been liberated from the original high-temperature silicate minerals and may be present as potentially recoverable nickel-bearing sulphide or free metallic Ni minerals. This is the case at the Dumont Nickel-Cobalt deposit in Quebec, which has an average grade of 0.27% Ni and 107ppm Co. Noble Minerals has proved up a similar Nickel-Cobalt Deposit in Kingsmill Township and we believe that the Crawford Township Property Nickeliferous body would be similar and all future diamond drilling of these bodies will be fire assayed for Cobalt.

Noble Minerals completed an airborne magnetic and EM survey in 2017 which showed very strong magnetic anomalies over the drill indicated Ni bearing peridotite bodies on the property, suggesting widespread serpentization. The magnetic anomaly

indicates a minimum 2 km strike length extent to the peridotite body which would be favorable for a very large tonnage, low-grade nickel deposit located close to surface and amenable to low-cost open pit mining methods, similar to the Dumont Nickel-Cobalt Deposit and Noble's Kingsmill Nickel-Cobalt deposit.

Randy S.C. Singh P.Geo (ON), P.Eng (ON) VP- Exploration & Project Development a "qualified person" as such term is defined by National Instrument 43-101 has verified the data disclosed in this news release, and has otherwise reviewed and approved the technical information in this news release on behalf of Noble.

FIRST OPTION

To earn 51% undivided interest Spruce must make (i) a payment of \$50,000 within fifteen (15) days of obtaining TSX Venture approval, and (ii) make a second payment of \$50,000 not later than six (6) months after the date of the first payment of \$50,000.

Spruce will issue 3,000,000 Class A common shares within five (5) days of obtaining TSX Venture approval and issue an additional 3,000,000 common shares not later than one (1) year after the date for the first issue of common shares. Spruce will also issue 5,000,000 exercisable warrants within five (5) days of obtaining TSX Venture approval with each such warrant being exercisable at the lowest exercise price as may be permitted by the TSXVE and having a term expiring five (5) years after issuance; and will issue an additional 5,000,000 exercisable warrants not later than one (1) year after the date for the first issue of warrants. with each such warrant being exercisable at the lowest exercise price as may be permitted by the TSXVE and having a term expiring five (5) years after issuance.

Spruce will incur a minimum of \$300,000 of Expenditures in the

first year following the Effective Date and an additional \$700,000 no later than the date that is eighteen (18) months following the Effective Date.

SECOND OPTION

Effective after Spruce has earned 51% interest, Spruce can earn an additional 24% undivided interest by issuing 2,000,000 common shares, and by incurring a further \$1,000,000 of qualifying expenditures on or before the third anniversary of the execution of the option agreement.

Once 75% is earned (or 51% should Spruce Ridge elect not to acquire a 75% interest), the Crawford Property will be operated as a participating Joint Venture. The transactions described in the Option and Joint Venture Agreement are subject to the approval of the TSX Venture Exchange.

John Ryan, Spruce Ridge President and CEO commented: "What drew Spruce to this property originally was that it was underexplored, close to the Kidd Creek mine and had several priority targets from a recently flown Em/Mag survey. What made this acquisition even more appealing was the historical drill results from INCO showing the potential of a large tonnage low grade nickel deposit. The nickel grades reported from the peridotite at Crawford are very close in grade with those at Dumont with some intervals assaying up to 0.42% Ni and we believe that there was never any analysis carried out for Cobalt which in today's environment is very important to the electrification of the automobile industry."

Vance White, Noble's President and CEO commented: "We're pleased to welcome the team of experts associated with Spruce Ridge to get this ~70,000 Hectare Project Area back on track as we feel there is a tremendous opportunity to identify mineral wealth on what has been a relatively underexplored project area

in close proximity to very satisfactory infrastructure. A number of drill ready targets have already been identified in the 12 townships that comprise this project area. Noble believes that VMS deposits of the Kidd Creek type occur in clusters.”

About Spruce Ridge Resources

Spruce Ridge Resources has a 100% interest in the Great Burnt Copper/Gold Property in Central Newfoundland which covers a series of copper & gold rich VMS deposits including the Great Burnt Main Deposit. Potential high-grade starter pit identified with 237,000 tonnes at 2.51% copper (undiluted) at the Great Burnt Zone. Management considers that an open pit with processing at a custom facility should have low capex requirements. Spruce has an agreement with Anaconda Mining whereby Anaconda acquired from Spruce Ridge the Viking and Kramer gold properties in northwestern Newfoundland. The Viking property is host to the Thor Deposit which has combined Indicated and Inferred resources totaling 83,000 ounces of gold at an average grade of 2.09 and 1.79 g/t Au respectively at a 1.0 g/t Au cut-off. It also has a 50% joint venture with Americas Silver Corporation on property that contains tailings with low grade gold and silver from the Drumlummon Mine in Montana.

About Noble Mineral Exploration Inc.:

Noble Mineral Exploration Inc. is a Canadian based junior exploration company which, apart from its shareholdings in MacDonald Mines Exploration Ltd. and its interest in the Wawa-Holdsworth gold exploration property in Wawa, Ontario, has as its flag ship program Project 81, a contiguous land package of approximately ~70,000 hectares covering 12 townships immediately north of the Kidd Creek Mine (celebrating its 51st year of operation). Project 81 which has seen very limited mineral

exploration over the last 50 years and has had a number of historical drill indicated Gold, Copper, Lead-Zinc, Silver and Nickel showings. Noble has confirmed the discovery of a very large, low grade Nickel-Cobalt Deposit in Kingsmill Township in 2012, which is within the project area. The Lucas Gold showing was also drill tested by Noble in 2012 with additional follow up drilling in 2018. Assay results are pending. Additional information can be found on our website at www.noblemineralexploration.com.
