

Pistol Bay to Start Drilling at Confederation Lake in March 2018

written by Raj Shah | February 22, 2018

February 22, 2018 ([Source](#)) – Pistol Bay Mining Inc. (TSX-V – PST; Frankfurt – 0QS2) (“**Pistol Bay**” or the “**Company**”) is pleased to announce that it is currently soliciting and reviewing bids from drilling contractors for the rights to drill

the Company’s Confederation Lake greenstone belt VMS properties. A decision is expected shortly, and drilling is planned to commence March 2018.

Pistol Bay has received the one million dollars (\$1,000,000) from Rio Tinto for the uranium assets it owned in the Athabasca Basin (see news release February 13, 2018). Proceeds from this payment will be used to fund the drilling program at Confederation Lake.

Three drill holes of at least 500 metres each are planned to further test the **Arrow Zone** and to retrieve core for preliminary metallurgical testing. The Arrow Zone was the subject of a 43-101 report in 2017 that presented an inferred mineral resource of 2,100,000 tonnes grading 5.78% zinc, 0.72% copper, 0.60 grams per tonne (g/t) gold and 19.5 g/t silver. (8.42% zinc eq.) (see news release February 15, 2018).

Approximately ten diamond drill holes totaling approximately 2,000 metres will test the **Fredart “A” Zone** (also referred to as the Copperlode “A” Zone). A historical resource estimate made

in 1971 for the Fredart “A” Zone, based on diamond drilling in the 1960s, was 386,000 tonnes grading 1.56% copper and 33.6 g/t silver, or alternatively 219,500 tonnes at 1.95% copper and 41.8 g/t silver. Neither of these estimates conforms to any class of mineral resource or mineral reserve defined by the 2014 CIM guidelines.

About Pistol Bay Mining

Pistol Bay Mining Inc. is a diversified Junior Canadian Mineral Exploration Company with a focus on zinc and base metal properties in North America. The company has also created a subsidiary for resource driven blockchain applications.

Cautionary note:

This report contains forward looking statements. Resource estimates, unless specifically noted, are considered speculative. Any and all other resource or reserve estimates are historical in nature and should not be relied upon. By their nature, forward looking statements involve risk and uncertainties because they relate to events and depend on factors that will or may occur in the future. Actual results may vary depending upon exploration activities, industry production, commodity demand and pricing, currency exchange rates, and, but not limited to, general economic factors. Cautionary Note to US

investors: The U.S. Securities and Exchange Commission specifically prohibits the use of certain terms, such as “reserves” unless such figures are based upon actual production or formation tests and can be shown to be economically and legally producible under existing economic and operating conditions.
