

Prophecy's Upcoming Drill Program to Increase Current Resources of Gibellini Vanadium Project in Nevada with Wood (AMEC)

written by Raj Shah | February 14, 2019

TSX: PCY | OTCQX: PRPCF

February 14, 2019 ([Source](#)) – **Prophecy Development Corp.** (“Prophecy” or the “Company”)

(**TSX:PCY, OTCQX:PRPCF, Frankfurt:1P2N**) announces that it has retained Amec Foster Wheeler E&C Services Inc. (Wood) to undertake updating of the

mineral resource and mining section for the Company’s upcoming Feasibility Study (“FS”) to be completed to the standards of National Instrument 43-101 (“**NI 43-101**”) for its Gibellini vanadium project located in Nevada, USA. The FS is anticipated to be completed by year end 2019.

Vanadium is a product classified as a strategic metal by the US Government and is primarily used for strengthening structural steel, but is also used in the aerospace industry for Ti-Al alloys. More recently, there has been an increase in demand to supply the new era of redox flow batteries for long-term energy storage, which has long been a challenge for the renewable energy sector.

Gibellini is the most advanced primary vanadium deposit in the United States, with a contained NI 43-101 compliant combined measured and indicated resource of **22.95 million tons at 0.286%**

V205 (technical report filed on SEDAR titled “Gibellini Vanadium Project, Eureka County, Nevada, NI 43-101 Technical Report on Preliminary Economic Assessment” effective May 29, 2018). The drilling program is expected to start following approval from the Bureau of Land Management (BLM), and will include up to 10 holes drilled 150 to 250 feet long in the higher-grade portions of the Gibellini deposit. It is hoped that by characterizing this mineralization with greater confidence, the Company can quantify more value for the project overall.

The remaining drill holes will focus on the Louie Hill deposit. There is strong indication from historical drilling that the Louie Hill deposit can be a high-value vanadium asset. However, much of this historical drilling could not be verified as archive drill samples were not available and thus, could not be used in the verification of the database supporting the resource estimation. Only the 9 holes that were drilled more recently were used in the Louie Hill Mineral Resource estimate that was reported in May 2018. The Company is confident that the 2019 drilling described herein could result in a significant addition of measured and indicated vanadium-bearing material to the project and add to the Gibellini project’s overall value and anticipated mine life. These drill holes will also be used for geochemical characterization of the deposit in support of future permitting.

This FS work will include optimized pit designs, mine plan layouts and the production schedule for an anticipated annual production of approximately 2.5 to 3.0 million tons per year, as well as a full accounting of the capital and operating costs, including mining equipment. It will incorporate the results of the Company’s current EPCM work being conducted by M3 that will include detailed engineering and equipment specifications. This refined level of information is intended to facilitate a bankable-level Feasibility Study by year end 2019 that is

expected to facilitate project financing going into 2020. The project permitting has been fully integrated into the study to ensure that the project design also reduces environmental impact and ensures full compliance with all regulatory requirements.

Qualified Persons

Kirk Hanson, Wood's nominated mining Qualified Person (QP) is independent of Prophecy, and has reviewed the information regarding Wood's involvement in the Gibellini Feasibility Study.

Additional technical contents of this news release have been prepared under the supervision of Danniell Oosterman, VP, Exploration of Prophecy. Mr. Oosterman is not independent of the Company in that he is an employee of the Company and most of his income is derived from the Company. Mr. Oosterman is a Qualified Person as defined in NI 43-101.

About Wood

The John Wood Group PLC is a global leader in the delivery of project, engineering and technical services to energy and industrial markets. Wood Group operates in more than 60 countries, employing around 55,000 people, with revenues of over \$10 billion.

About Prophecy

Prophecy is developing the Gibellini project – the only large-scale, open-pit, heap-leach vanadium project of its kind in North America. Located in Eureka County, Nevada, Gibellini has the largest primary vanadium Measured and Indicated Mineral Resource known in the USA and is currently undergoing EPCM and permit development. Further information on Prophecy can be found at www.prophecydev.com.
