

Quantum Receives 121 Drill Hole Permit for NMX East, Quebec

written by Raj Shah | April 2, 2026

Advancing Critical Mineral Exploration in North America

April 2, 2026 ([Source](#)) – **Quantum Critical Metals Corp.** (TSX.V: **LEAP** | OTCQB: **ATOXF** | FSE: **86A1**) (“**Quantum**” or the “**Company**”) is pleased to announce that it has received approval from Ministère des Ressources naturelles et des Forêts for a drilling permit authorizing up to 121 diamond drill holes at its NMX East property, located in the James Bay – Eeyou Istchee region of northern Québec.

The permit enables the Company to undertake systematic exploration drilling across the project area. The planned program will focus on muscovite-rich pegmatite dykes with the objective of delineating mica hosted critical mineralization, including gallium and rubidium. In addition, drilling is planned within an ultramafic rock package on the southern portion of the property to evaluate the potential for nickel polymetallic-mineralization, as previously outlined in the Company’s news release on August 14th, 2025.

Marcy Kiesman, CEO of Quantum stated, “Receiving the drill permit from the Ministère des Ressources naturelles et des Forêts marks a significant and important step forward in advancing the NMX East Project. The approval enables Quantum to initiate a comprehensive, multi phase drilling program designed to systematically define mineralization across both pegmatite and ultramafic packages. With growing global demand for critical minerals such as gallium, rubidium and nickel, advancing NMX

East supports our strategy of developing new sources of strategic metals within stable North American jurisdictions and strengthening Western supply chains.”

The 121-drill hole program is expected to be executed in multiple phases over the next two years, allowing the Company to incorporate analytical results from each phase into the design of subsequent campaigns and optimize exploration.

The NMX East Project is strategically located in Québec, one of the world’s leading mining jurisdictions, and is being explored for its potential to host critical minerals associated with muscovite rich pegmatite systems. The Company believes that continued exploration success at NMX East, combined with its metallurgical advancements in recovery of critical metals from muscovite mica, positions Quantum to play an important role in supporting secure Western supply chains for strategic minerals.

The Company has granted an aggregate of 4,000,000 incentive stock options to certain consultants, directors and officers of the Company in accordance with the Company’s stock option plan. The options are exercisable at a price of \$0.07 per common share. The options are valid for a period of three years and will vest immediately in accordance with the Company’s stock option plan. The grant of options is subject to the acceptance of the TSX Venture Exchange.

About Quantum Critical Metals Corp.

Quantum Critical Metals Corp. (TSX.V: LEAP) (OTCQB: ATOXF) (FSE: 86A1) is a Canadian mineral exploration company focused on advancing critical metals projects that power next-generation technologies. With a growing portfolio of promising assets—including the NMX East Gallium-Rubidium-Cesium Project in Québec, the Discovery Gallium-Rubidium-Cesium and polymetallic project in Québec, the Babine South Silver Project in British

Columbia, and the newly acquired Prophecy Germanium-Gallium-Zinc Project in British Columbia, among others, the Company is strategically positioned to support the West's transition to a secure and sustainable critical metals supply.
