

Search Minerals to Commence an Initial 2,000m FOX MEADOW Phase 1 Drill Program

written by Raj Shah | November 8, 2022

November 7, 2022 ([Source](#)) – Search Minerals Inc. (TSXV: SMY | OTCQB: SHCMF) (“Search” or the “Company”) is pleased to announce the commencement of an initial 2,000m FOX MEADOW Phase 1 drill program. FOX MEADOW is the third major drill target in the Port Hope Simpson – St. Lewis Critical Rare Earth Elements (CREE) District in SE Labrador. The drill program is expected to commence shortly, as our drilling contractor mobilizes on site this week. The drilling is expected to be completed in early December, 2022.

FOX MEADOW DRILL PROGRAM

▪ Exploration:

- Approximately 8-12 oriented diamond drill holes;
- One drill rig to be mobilized from St. Lewis to FOX MEADOW;
- All core will be lithologically, structurally and geotechnically logged;
- All mineralized intervals will be sampled for assay and tested for specific gravity and magnetic susceptibility.

▪ Drilling Program Results:

- We anticipate receiving all assay results by late spring 2023.

▪ Drill Targets:

- Extensive channel programs from 2013 to 2021 (see Search Minerals News Release May 5, 2022) have outlined numerous medium- to high-grade REE

mineralized zones;

- The current program will target high-grade zones in the core of the known surface extent of the mineralization in order to trace them at depth;
- The drill program is also designed to evaluate the overall thickness of the mineralized belt;
- An on-going channeling program at **FOX MEADOW** is extending the mineralized zone to the south and southeast in anticipation of future drill programs;
- On surface the mineralization is presently open to the NW, the SE and to the SW in some sections.

Dr. Randy Miller, Vice-President, Exploration comments: “The surface extent of the **FOX MEADOW** mineralized zone is larger than both **DEEP FOX** and **FOXTROT** (both 350-450m strike length and up to 40m thick). We anticipate needing additional channel programs and a much larger drill program in the future to fully explore the entire **FOX MEADOW** mineralized zone at depth and along strike.”

Greg Andrews, President/CEO states: “We are excited to mobilize to our **FOX MEADOW** prospect for an initial 2,000m drill program. This program will allow a first chance to generate preliminary down hole data as an extension of our channel sample program on surface. The growth drivers for the rare earth market remains the rare earth (permanent) magnets used in electric motors for electric vehicles and generators in wind turbines. Search Minerals will continue to seek strategic partners to advance our prospects in our extensive rare earth element land position. We believe a secure and sustainable rare earth element supply chain can be built in Newfoundland and Labrador, a very mining friendly and innovative technology based jurisdiction.”

The **FOX MEADOW** project occurs approximately 11 km west of Port Hope Simpson and 1 km from a gravel-covered, three-season forest

access road. Port Hope Simpson is approximately 40 km northwest of **FOXTROT** and 50 km from **DEEP FOX** on paved and all-season gravelled roads.

Qualified Person:

Dr. Randy Miller, Ph.D., P.Geo., is the Company's Vice President, Exploration, and Qualified Person (as defined by National Instrument 43-101) who has supervised the preparation of and approved the technical information reported herein. The Company will endeavour to meet high standards of integrity, transparency, and consistency in reporting technical content, including geological and assay data.

About Search Minerals Inc.

Led by a proven management team and board of directors, Search is focused on finding and developing Critical Rare Earths Elements (CREE), Zirconium (Zr) and Hafnium (Hf) resources within the emerging Port Hope Simpson – St. Lewis CREE District of South East Labrador. Search controls two deposits (Foxtrot and Deep Fox), two drill ready prospects (Fox Meadow and Silver Fox) and numerous other REE prospects, including Fox Valley, Foxy Lady and Awesome Fox, along a 64 km long belt forming a REE District in Labrador. Search has completed a preliminary economic assessment report for **DEEPFOX** and **FOXTROT**. Search is also working on three exploration prospects along the belt which include: **FOX MEADOW**, **SILVER FOX** and **AWESOME FOX**.

Search has continued to optimize our patented Hydrometallurgy Direct Extraction Process technology with the support from the Department of Industry, Energy and Technology, Government of Newfoundland and Labrador, and from the Atlantic Canada Opportunity Agency. We have completed two pilot plant operations and produced highly purified mixed rare earth carbonate concentrate and mixed REO concentrate for separation and

refining. We also recognize the continued support by the Government of Newfoundland and Labrador for its Junior Exploration Program.

Search Minerals was selected to participate in the Government of Canada Accelerated Growth Service (“AGS”) initiative, which supports high growth companies. AGS, as a ‘one-stop shop’ model, provides Search with coordinated access to Government of Canada resources as Search continues to move quickly to production and contribute to the establishment of a stable and secure rare earth element North American and European supply chain.

Cautionary Statement Regarding “Forward-Looking” Statements:

Except for the statements of historical fact, this news release contains “forward-looking information” within the meaning of the applicable Canadian securities legislation that is based on expectations, estimates and projections as at the date of this news release. “Forward-looking information” in this news release includes information about the Company’s exploration and development plans and the timing thereof, and other forward-looking information. Factors that could cause actual results to differ materially from those described in such forward-looking information include, but are not limited to, results of

exploration work, the ability to secure any required funding, receipt of all required regulatory approval and the ability to secure the necessary resources to complete the planned exploration work.

The forward-looking information in this news release reflects the current expectations, assumptions and/or beliefs of the Company based on information currently available to the Company. In connection with the forward-looking information contained in this news release, the Company has made assumptions about the Company's financial condition and development plans do not change as a result of unforeseen events, and that the Company will receive all required regulatory approvals.

Although the Company believes that the assumptions inherent in the forward-looking information are reasonable, forward-looking information is not a guarantee of future performance and accordingly undue reliance should not be put on such information due to the inherent uncertainty therein. The Company does not assume any obligation to update the forward-looking statements, or to update the reasons why actual results could differ from those reflected in the forward-looking statements, unless and until required by applicable securities laws. Additional information identifying risks and uncertainties is contained in the Company's filings with the Canadian securities regulators, which filings are available at www.sedar.com.
