

TRU Precious Metals Options Property with Visible Gold in Further Expansion of Golden Rose Project

written by Raj Shah | July 14, 2021

July 14, 2021 ([Source](#)) – TRU Precious Metals Corp. (TSXV: TRU) (OTCQB: TRUIF) (FSE: 706) (“TRU” or the “Company”) is pleased to announce that it has entered into an option agreement dated July 13, 2021 (the “Option Agreement”), with an arm’s length individual (the “Optionor”), in respect of 5 mineral licenses covering 51 contiguous claims (12.75 square kilometres (km²)) located in west-central Newfoundland (the “Optioned Claims”), on which the Company has found visible gold. The Optioned Claims are contiguous with the Company’s flagship Golden Rose project (“Golden Rose” or the “Golden Rose Project”). In addition, the Company has indirectly staked a larger land package surrounding the Optioned Claims (the “Staked Claims”). Image 3 below contains a map showing the locations of the Optioned Claims and the Staked Claims.

TRU Co-Founder and CEO Joel Freudman commented: “I am excited about this option to add to our district-scale land package at the Golden Rose Project. TRU has moved aggressively in recent weeks to expand our footprint here, and the presence of visible gold on the Optioned Claims further bolsters the geological merit of Golden Rose. Having now tactically consolidated some of the most prospective property within and surrounding Golden Rose, for the time being we are satisfied that we have achieved one of our strategic objectives previously announced only one month ago on June 15th, namely property acquisitions contiguous

with or close to the Company's existing properties. With these acquisitions completed at Golden Rose, we believe we are ideally positioned for further discoveries there as we continue to carry out our comprehensive ground-level exploration program in anticipation of drilling Golden Rose later this year."

Highlights

- Due diligence sampling and panning on the Optioned Claims by TRU management consistently returned numerous pristine to modified gold grains. These gold grains were found within a few meters of a partially exposed hardpan gossan (oxidized rock formation often found above mineral occurrences) consisting of iron oxide encrusted quartz grains and other minerals. (Image 1)
- A single large sample collected on the Optioned Claims by TRU was sent to Overburden Drilling Management Limited ("ODM") of Ottawa, Ontario, whose analysis identified 97 visible gold grains that may have a nearby source. (Image 2)

Optioned Claims

Barry Greene, P.Geo., TRU's Vice-President of Property Development, and Pearce Bradley, P.Geo., TRU's Exploration Manager, both visited the Optioned Claims on a recent due diligence visit and collected a single 12.9 kilogram wet sample for submission to ODM for analysis. Mr. Greene also discovered the gossan during such visit.

ODM's analysis concluded: "The gold grains were likely subjected to minimal water transport as evidenced by the high proportion of pristine + modified morphologies and relatively high abundance of silt-sized grains suggesting a nearby source. The high calculated [heavy mineral concentrate] Au value suggests that the source, if bedrock, may be high grade."

Separate from TRU's sample, sampling and panning of beach sand and gravel over approximately 1 km by the Optionor reportedly returned numerous pristine to modified gold grains. The Optionor reported that the partially-exposed gossan identified by TRU was examined in several locations under the roots of upright trees.

Barry Greene, Vice-President of Property Development of TRU, added: "After panning so many pristine gold grains, we were pleasantly surprised to discover the hardpan gossan exposed under the roots of a nearby growing tree. As the roots were exposed to waves only during stormy weather, the gossan is not well exposed. Hopefully, the gossan represents the surface expression of a mineralized source which would enhance TRU's Golden Rose Project. The mode of occurrence and morphology of the gold grains are indicative of being derived from a local erosional surface. As it lies along the intersection of several structures, the Optioned Claims will be an immediate target for our exploration team already working in the area."

TRU's exploration team is already adapting the Company's field program to aggressively explore the Optioned Claims through soil sampling, ground geophysics and trenching. TRU plans to move all crews to the Optioned Claims shortly once exploration permits are in place.

Terms of the Option Agreement

In order to acquire a 100% interest in the Optioned Claims, the Company must make the following cash payments and issue the following common shares in the capital of the Company ("TRU Shares"):

Share Issuances	Cash Payments	Deadline
100,000 TRU Shares	\$25,000	Upon signing the Option Agreement (completed)

100,000 TRU Shares	\$25,000, payable at the Company's discretion in cash or TRU Shares	On or before July 13, 2022
100,000 TRU Shares	\$40,000, payable at the Company's discretion in cash or TRU Shares	On or before July 13, 2023
300,000 TRU Shares in total	\$90,000 in total	

In addition, the Company must fund \$50,000 in exploration expenditures on the Optioned Claims on or before July 13, 2022.

Upon exercise of the option, TRU will grant the Optionor a 2.0% net smelter returns royalty from any future mineral production at the Optioned Claims, of which 1.0% can be repurchased by the Company for \$1,000,000 at any time.

Following the Company's exercise of the option, should the Company define a National Instrument 43-101-compliant measured and indicated mineral resource estimate equal to at least 1,000,000 gold ounces (at 1 g/t cut-off) on the Optioned Claims, the Company shall make an additional cash payment of \$250,000 to the Optionor.

The Option Agreement remains subject to regulatory approval by the TSX Venture Exchange.

Staked Claims

In addition to, but separate from, the Optioned Claims, TRU has also acquired, via indirect staking, 24 km² of mineral claims contiguous with the Optioned Claims. The Staked Claims are being promptly transferred into TRU's ownership for no consideration beyond reimbursement of staking costs.

The Staked Claims are contiguous with the existing Golden Rose Project and the Optioned Claims. Taken together with all other Golden Rose property transactions announced by TRU during June and July of 2021, TRU has more than doubled the property package from its initial size of 105.0 km² to a total of 215.25 km², all along and adjacent to the deposit-bearing Cape Ray – Valentine Lake Shear Zone.

National Instrument 43-101 Disclosures

The 12.9kg wet beach sand sample was collected independently by TRU and was pre-screened in the field to remove coarse material. The sample was placed in a large plastic sample bag, sealed and shipped by TRU to ODM. At the lab, ODM collected one +/-300 gram archival split. The sample was panned for gold, PGM's and fine-grained metallic indicator minerals. Shaking table concentrates were refined by heavy liquid separation at S.G 3.3 to create Heavy Mineral Concentrates (HMCs)

The samples presented herein are selective by nature, and values reported may not represent the true grade or style of mineralization across the Golden Rose Project, including the Optioned Claims and/or the Staked Claims. The potential grades are conceptual in nature; there has been insufficient exploration to define a mineral resource; and it is uncertain whether further exploration will result in any targets being delineated as a mineral resource.

Barry Greene, P.Geo. is a qualified person as defined by National Instrument 43-101 and has reviewed and approved the contents and technical disclosures in this press release. Mr. Greene is a director and officer of the Company and owns securities of the Company.

About TRU Precious Metals Corp.

TRU has assembled a portfolio of 5 gold exploration properties in the highly prospective Central Newfoundland Gold Belt. The Company has an option with a subsidiary of TSX-listed Altius Minerals Corporation to purchase 100% of the Golden Rose Project, located along the deposit-bearing Cape Ray – Valentine Lake Shear Zone. TRU also owns 100% of the Twilite Gold Project, located along the same Shear Zone, and 3 under-explored properties including its Rolling Pond Property (under option) bordering New Found Gold Corp.'s high-grade Queensway Project. TRU's common shares trade on the TSX Venture Exchange under the symbol "TRU," on the OTCQB Venture Market under the symbol "TRUIF," and on the Frankfurt exchange under the symbol "706."

TRU is a portfolio company of Resurgent Capital Corp. ("Resurgent"), a merchant bank providing venture capital markets advisory services and proprietary financing. Resurgent works with promising public and pre-public micro-capitalization companies listing on Canadian stock exchanges. For more information on Resurgent and its portfolio companies, please visit Resurgent's LinkedIn profile at <https://ca.linkedin.com/company/resurgent-capital-corp>.

Cautionary Statements Regarding Forward-Looking Information

Neither TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

The exploration information herein relating to samples panned by the Optionor on the Optioned Claims has been supplied by the Optionor and not been independently verified by TRU.

This press release contains certain forward-looking statements, including those relating to acquiring and exploring the Optioned Claims, the Staked Claims, and the Golden Rose Project. These statements are based on numerous assumptions regarding the Optioned Claims and the Option Agreement, the Staked Claims, and the Golden Rose Project, that are believed by management to be reasonable in the circumstances, and are subject to a number of risks and uncertainties, including without limitation: mineralization hosted on adjacent and/or nearby properties is not necessarily indicative of mineralization hosted on the Optioned Claims or elsewhere on the Golden Rose Project; the exploration or monetization potential of the Optioned Claims and/or the Golden Rose Project; challenges in identifying and executing additional acquisitions, on favourable terms or at all; risks inherent in mineral exploration activities; volatility in financial markets, economic conditions, and

precious metals prices; and those other risks described in the Company's continuous disclosure documents. Actual results may differ materially from results contemplated by the forward-looking statements herein. Investors and others should carefully consider the foregoing factors and should not place undue reliance on such forward-looking statements. The Company does not undertake to update any forward-looking statements herein except as required by applicable securities laws.
