

Viscount Mining Receives Results from Phase 3 Field Survey, Silver Cliff Colorado

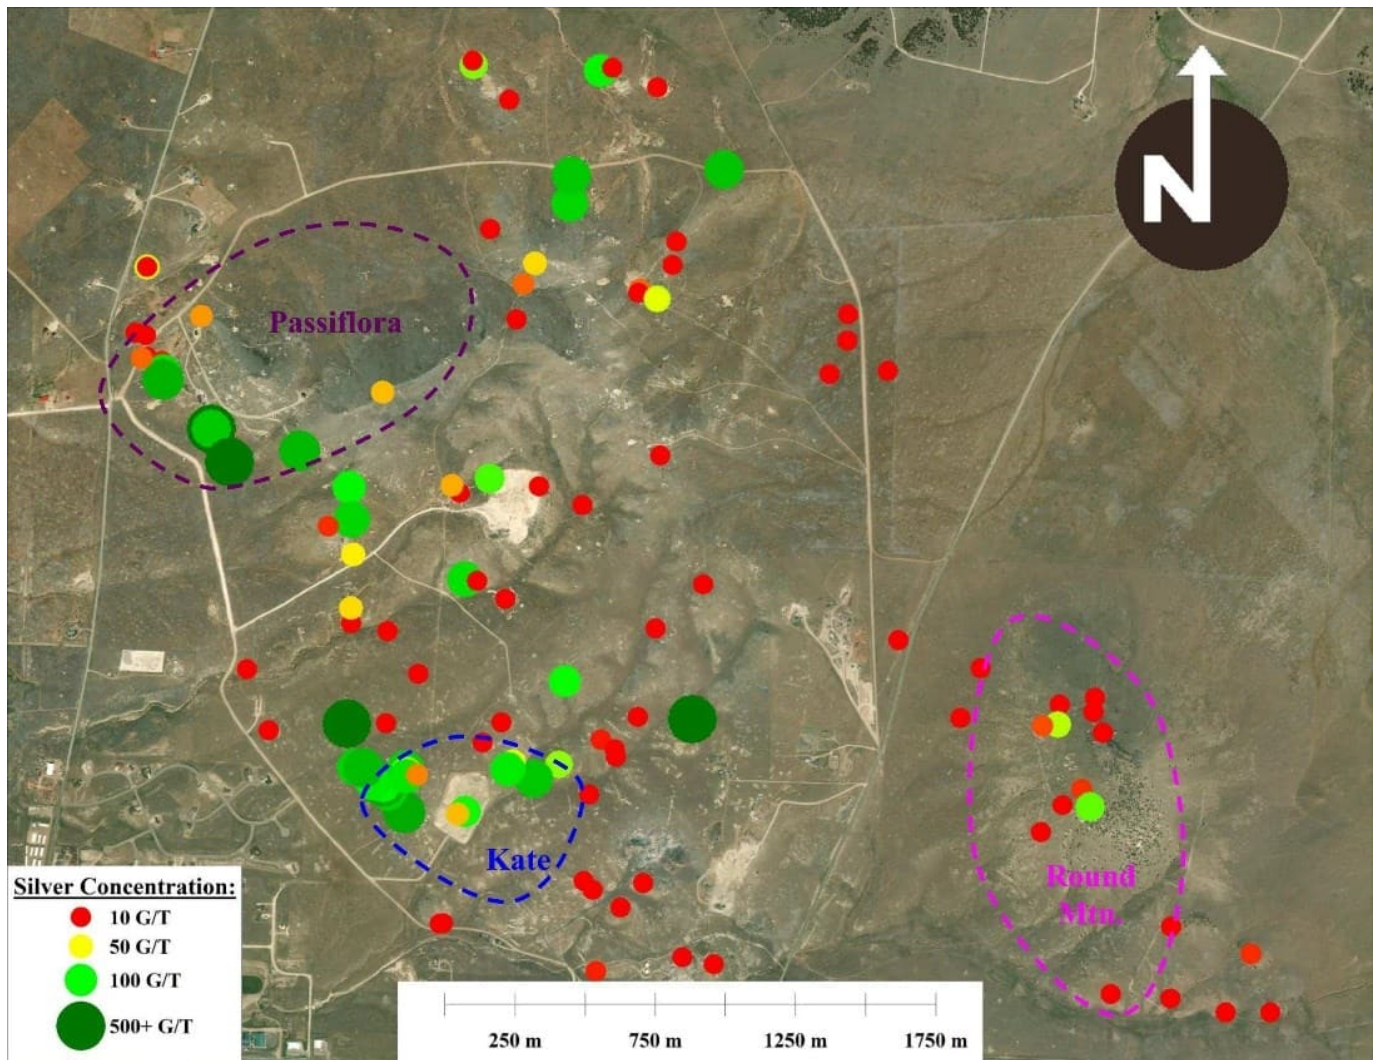

written by Raj Shah | November 3, 2021

November 3, 2021 ([Source](#)) – **Viscount Mining Corp. (TSXV: VML) (OTCQX: VLMGF)** (“**Viscount** or “**the Company**”) is pleased to announce it has received results from its third phase of the rock chip program at their Silver Cliff property in Colorado.

Highlighted results include:

- 28 samples assaying over 100 g/t silver.
- 18 samples assaying over 200 g/t silver.
- 4 samples assaying over 550 g/t silver including 1330 g/t and 737 g/t in the northern Kate area and 692 g/t and 560 g/t in the south Passiflora area.

Phase 3 of Viscount Mining’s Silver Cliff drill program consisting of 13 holes over 881 meters has recently concluded and all of the core samples have been shipped and are currently being assayed. As a supplemental part of Viscount’s phase 3 drilling program, 50 surface rock chip samples were collected around the Kate Deposit, Passiflora and surrounding areas. Most of these samples were gathered from century-year-old, shallow mining pits which are found scattered throughout the Silver Cliff region. A map depicting silver concentration of each of these 124 surface samples including 74 local rock chip samples collected back in 2013 is shown below.

Silver Concentration and Locations

Twenty eight (28) of these rock chip samples collected at the surface tested over 100 g/t silver, with the highest testing sample assayed 1330 g/t silver. The presence of such high-grade silver deposits being revealed at the surface by shallow, abandoned pits, shows high promise for an eventual open pit mine. Many of these higher testing samples were collected from two locations: the southwest Passiflora and the northern area of the Kate Deposit and extension.

In the southwest Passiflora area, concentrations of silver in collected rock chip samples ranged from 122 G/T to 692 G/T. Though Viscount has done less extensive drilling in the Passiflora, most of the promising mineralization and assay

values have come from holes drilled in this southwest region (DDH-20-05 and DDH-21-10). Two of the holes drilled during phase 3 were also located in this area and are currently being assayed. An internal report from CoCa Mines in 1983, estimated a potential resource of 40 million short tons, based on 14 drill holes (not NI 43-101 compliant), with the best intercept reporting to be 256 g/t silver and 1.4 g/t gold. Viscount drilled four holes in the Passiflora in 2020/21 to depths greater than 193 m that showed anomalous silver throughout all, some anomalous gold as well as strong silica and clay alteration and pyritization over most of the holes. Duval Mining geologists had identified a quartz monzonite at shallow depth in the vicinity of the Passiflora mine. Quartz monzonite is a rock that is also commonly associated with porphyry ore bodies. The additional holes at the Passiflora are aimed at identifying this structure.

In the northern area of the Kate Deposit, 15 surface rock chip samples assayed between 71 and 1330 g/t silver, well above the current economic cut-off grade. Seven (7) of these high-grade rock chip samples, including the two highest testing (737 and 1330 G/T), on land outside of the current extent of the ore body as defined by Dr. Gilles Arseneau in 2018. The report titled Mineral Resource Estimate for the Silver Cliff Property, Custer County, Colorado, USA dated April 15, 2018 was prepared by Dr. Gilles Arseneau, Ph.D., P. Geo of Arseneau Consulting Services ("ACS") in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum ("CIM") Definition Standards incorporated by reference in National Instrument 43-101 ("NI 43-101") for its Silver Cliff property in Colorado.

These results support a possible expansion of the ore body, specifically near the surface, both to the West and Northeast. These are areas that were drilled during the third phase. As we await the core results, this collection of surface rock chip

results gives us some insight into the silver resource expansion as defined by Dr. Gilles Arseneau in 2018 and for the Phase 4 drill program preparation.

Jacob Hooker, Exploration Manager commented: “The completion of Phase 3 drilling was designed to test outside the boundaries of the Kate Deposit. Upon receipt of the drill results in correlation with the soil samples, the final phase 4 of drilling will be designed to further the understanding of the Kate deposit. The goal of expanding our NI 43-101 resource is meeting and surpassing company expectations.”

Tenneco Minerals leased the Kate property in 1987. They had previous drill data available to them, which was the results from 11,930 meters in 249 drill holes that had been done since 1968. The following two years, Tenneco drilled an additional 143 holes totaling 7,949 meters. Based on the accumulated data and feasibility study, Tenneco Minerals made the decision with silver at \$5.00 USD an ounce to construct at that time a \$35,000,000 USD milling operation for the extraction of the silver reserves at Silver Cliff. Shortly thereafter Tenneco’s parent company was sold, and the planned milling operation was abandoned.

Qualified Persons

The scientific and technical information contained in this news release has been reviewed and approved by Harald Hoegberg PG, an independent consulting geologist who is a “Qualified Person” (QP) as such term is defined under National Instrument 43-101 – *Standards of Disclosure for Mineral Projects* (“NI 43-101”).

About Viscount Mining (TSXV: VML) (OTCQX: VLMGF)

Viscount Mining is a project generator and an exploration company with a portfolio of silver and gold properties in the

Western United States, including Silver Cliff in Colorado and Cherry Creek in Nevada.

The Silver Cliff property in Colorado lies within the historic Hardscrabble Silver District in the Wet Mountain Valley, Custer County, south-central Colorado. It is located 44 miles WSW of Pueblo, Colorado, and has year-around access by paved road. The property consists of 96 lode claims where high grade silver, gold and base metal production came from numerous mines during the period 1878 to the early 1900's. The property underwent substantial exploration between 1967 and 1984.

The property is interpreted to encompass a portion of a large caldera and highly altered sequence of tertiary rhyolitic flows and fragmental units which offers potential to host deposits with both precious and base metals. This has been demonstrated in the mineralization historically extracted from the numerous underground and surface mining operations. Drilling in the 1980s by Tenneco resulted in a historical pre-feasibility study on which basis it was planned to bring the property to production. The plan was abandoned following a takeover by another company.

The Cherry Creek exploration property is in an area commonly known as the Cherry Creek Mining District, located approximately 50 miles north of the town of Ely, White Pine County, Nevada. Cherry Creek consists of 578 unpatented and 17 patented claims as well as mill rights. Cherry Creek includes more than 20 past producing mines. In January 2021, Viscount entered into an exploration earn – in agreement with a wholly owned subsidiary of Centerra Gold Inc. Centerra is a Canadian-based gold mining company focused on operating, developing, exploring and acquiring gold properties in North America, Asia and other markets worldwide.

FORWARD-LOOKING STATEMENTS

This news release includes certain statements that may be deemed "forward-looking statements" within the meaning of applicable Canadian securities legislation. Forward-looking statements include, but are not limited to, statements with respect to Viscount Mining's operations, exploration and development plans, expansion plans, estimates, expectations, forecasts, objectives, predictions and projections of the future. Specifically, this news release contains forward-looking statements with respect to the Offering, the receipt of required approvals, the timing of thereof and the amount and use of proceeds therefrom. Generally, forward-looking statements can be identified by the forward-looking terminology such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "projects", "intends", "anticipates", or "does not anticipate", or "believes", or "variations of such words and phrases or state that certain actions, events or results "may", "can", "could", "would", "might", or "will" be taken", "occur" or "be achieved". Forward-looking statements are subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of Viscount Mining to be materially different from those expressed

or implied by such forward-looking statements, including but not limited to: risks related to the exploration and development and operation of Viscount Mining's projects, the actual results of current exploration, development activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, future precious metals prices, as well as those factors discussed in the sections relating to risk factors of our business filed in Viscount Mining's required securities filings on SEDAR. Although Viscount Mining has attempted to identify important factors that could cause results to differ materially from those contained in forward-looking statements, there may be other factors that cause results to be materially different from those anticipated, described, estimated, assessed or intended.

There can be no assurance that any forward-looking statements will prove accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. Viscount Mining does not undertake to update any forward-looking statements that are incorporated by reference herein, except in accordance with applicable securities laws.

THE TSX VENTURE EXCHANGE INC. HAS NEITHER APPROVED NOR DISAPPROVED THE CONTENTS OF THIS PRESS RELEASE. NEITHER THE TSX VENTURE EXCHANGE NOR ITS REGULATION SERVICES PROVIDER (AS THAT TERM IS DEFINED IN THE POLICIES OF THE TSX VENTURE EXCHANGE) ACCEPTS RESPONSIBILITY FOR THE ADEQUACY OR ACCURACY OF THIS RELEASE.
