ZEN Graphene Solutions Announces Collaboration with Graphene Composites Ltd. to Develop a COVID-19 Virucidal Graphene-Based Composite Ink for Face Masks

written by Raj Shah | April 30, 2020

April 30, 2020 (<u>Source</u>) - **ZEN Graphene Solutions Ltd.** (TSXV: ZEN)
("**ZEN**" or the "Company") is pleased
to announce an international
collaboration with UK-based Graphene
Composites Ltd (GC) to fight COVID-19
by developing a potential virucidal

graphene-based composite ink that can be applied to fabrics including N95 face masks and other personal protective equipment (PPE) for significantly increased protection. Once the development, testing, and confirmation of the graphene ink's virucidal ability have been completed, the ink will then be incorporated into fabrics used for PPE.

Francis Dubé, CEO of ZEN commented, "We are pleased to be collaborating with GC and be on the forefront of a new innovative technology that could contribute to combating the deadly COVID-19 virus. The development of this potential COVID-19 virucidal graphene ink is coming at a crucial time to provide effective PPE supplies for the safety of frontline workers and hospital staff." Dr. Dubé continued, "The current N95 masks trap the virus but don't kill it. Our testing will

demonstrate if the graphene ink is an effective virucide which would kill the virus as this could make a big difference to people's safety. We have been very impressed by the Graphene Composites team and look forward to continued collaborations."

Sandy Chen, CEO of GC stated, "Combining the deep nanomaterials expertise of GC and ZEN with a truly collaborative approach has enabled us to do a year's worth of R&D in a matter of weeks. Quickly developing and deploying our virucidal/germicidal ink would make a significant difference in slowing the rate of infection — thus saving many lives."

Under the collaboration, ZEN has synthesized a silver nanoparticles functionalized graphene oxide ink at their lab in Guelph, Ontario that has been documented by previous researchers to kill earlier versions of coronavirus. Once testing is completed, the ZEN/GC graphene ink would then be incorporated into a fabric to be included into masks and filters designed by GC.

Efficacy testing of the silver-graphene oxide-based ink to kill the COVID-19 virus (SARS-CoV-2) will be conducted at Western University's ImPaKT Facility Biosafety Level 3 lab in Ontario. In addition, the graphene ink will be tested to kill influenza A and B viruses at Biosafety Level 2 labs in the UK and US.

About ZEN Graphene Solutions Ltd.

ZEN is an emerging graphene technology solutions company with a focus on the development of graphene-based nanomaterial products and applications. The unique Albany Graphite Project provides the company with a potential competitive advantage in the graphene market as independent labs in Japan, UK, Israel, USA and Canada have independently demonstrated that ZEN's Albany $Pure^{TM}$ Graphite is an ideal precursor material which easily

converts (exfoliates) to graphene, using a variety of mechanical, chemical and electrochemical methods.

About Graphene Composites Ltd.

GC is an innovative nanomaterials technology company, driven by an ethos to create life-changing products. Using graphene and other nanomaterials, we produce a range of composites that are amongst the strongest, lightest, most resilient materials ever created. A leader in our field, we have the ability to combine science, connected applications and productization rapidly and efficiently.
